Background

INTRODUCTION

The *Transit Safety & Security Statistics & Analysis Annual Report*, formerly known as the *Safety Management Information Statistics (SAMIS) Annual Report*, is now in its eleventh year of production, providing uniformly collected comprehensive safety and security data. These data are collected from all recipients or beneficiaries of Urbanized Area Formula funds through the National Transit Database (NTD) Reporting System.¹

This year's report includes safety and security data for Directly Operated (DO) and Purchased Transportation (PT). Purchased Transportation reported data are only for those services provided under contract. All transit agencies subject to NTD reporting are required to report safety data. A list of all reporters is included in the body of this report.

Transit safety data are collected in four basic categories: Collisions, Derailments/Buses going off road, Personal Casualties, and Fires. Each of these categories is further delineated in order to obtain detailed information on the exact nature of the incidents.

Transit security data are modeled after the Federal Bureau of Investigation's Uniform Crime Reporting System, using standardized offense definitions. Two types of security data are collected: reports of Part I (crime index) offenses, and arrests for Part II (most other) offenses. Transit agencies serving urbanized areas (UZAs) with populations of 200,000 or more are required to report security data.

To facilitate the reader's understanding of the information presented, the safety and security data collection instrument, Form 405, is presented at the end of this introduction.

¹ Transit agencies with nine or fewer vehicles for non-fixed guideway systems, public carriers receiving no Urbanized Area Formula funds, private conventional and subscription bus services operators, and providers of services only under a demonstration grant are not required to report data under the NTD Reporting System, and thus are not included in this Annual Report.

This document reports these safety statistics for the following transit modes:

- Automated Guideway (AG)
- Commuter Rail (CR)
- Demand Response (DR)
- Heavy Rail (HR)
- Light Rail (LR)
- Motor Bus (MB)
- Vanpool (VP)

An abbreviated section is also presented for Cable Car (CC), Ferryboat (FB), Jitney (JT), and Inclined Plane (IP). Monorail (MO), Publico (PB), Aerial Tramway (TR), and Other (OR) modes had no reportable incidents.

As with previous years' reports, caution should be used when making comparisons across different modes of transit, and also against data from other transportation reporting systems such as those for aviation and trucking. When comparing modes of transit, key differences should be kept in mind. For example, some transit modes run on exclusive rights-of-way while others mix with general traffic on surface roads. Some have extensive stations and terminals (where many injuries happen) while others have no such facilities. When making comparisons with data from other transportation reporting systems, it is important to consider that the reporting thresholds, assumptions, and definitions may be very different. For example, this document reports transit property damage when the damage exceeds \$1,000, while other transportation industries use dollar thresholds that may be higher.

Consists of one or more automatically controlled vehicles operating on an exclusive guideway.

CC - Cable Car

Streetcar type of vehicles operating by means of an attachment to a moving cable located below the street surface and powered by engines or motors at a central location not on board the vehicle.

CR - Commuter Rail

Urban passenger train service for local short distance travel between a central city and suburbs. Commuter rail does not include heavy rail or light rail service. Service of a predominantly intercity nature is excluded, except where a local portion is operated under public agency contract for commuter purposes.

DR - Demand Response

Personal transit service operated on roadways providing service on demand. Vehicles are normally dispatched, and used exclusively for this service.

FB - Ferryboat

Vessels carrying passengers and/or vehicles over a body of water. The vessels are generally steam- or diesel-powered conventional ferry vessels.

HR - Heavy Rail (Rapid Rail)

Transit service using rail cars powered by electricity which is usually drawn from a third rail and usually operated on exclusive rights-of-way. It generally uses longer trains and has longer spacing between stations than light rail.

IP - Inclined Plane

Special tramway type of vehicles operating up and down slopes on rails via a cable mechanism so that passenger seats remain horizontal while the undercarriage (truck) is angled parallel to the slope.

JT - Jitney

Passenger cars or vans operating on fixed routes (sometimes with minor deviations) as demand warrants without fixed schedules or fixed stops.

LR - Light Rail (Streetcar)

Urban transit which uses predominantly reserved but not always grade-separated rights-of-way. Electrically powered rail vehicles operate alone or in trains.

MB - Motor Bus

Rubber-tired passenger vehicles that operate on roadways. Motor bus service implies fixed routes and schedules. The Transit Safety & Security Statistics & Analysis report presents motor bus data in three categories. This is done to reflect the differences in operating environments and traffic mix, and to allow meaningful comparison between the motorbuses and other transit modes. The categories in this document are determined by the size of an agency's fleet. They are:

LMB - Large Motor Bus, more than 500 buses.

MMB - Medium Motor Bus, between 100 and 500 buses.

SMB - Small Motor Bus, fewer than 100 buses.

TB – Trolley bus

Rubber-tired passenger vehicles operating singly on city streets. Trolley buses are driven electrically with the power being drawn from an overhead catenary. The data for trolley buses are combined with the Motor Bus data.

VP - Vanpool

Public-sponsored commuter service operating under prearranged schedules for pre-formed groups of riders in 8- to 18-seat vehicles. Drivers are also commuters who receive little or no compensation besides free transportation and use of the vehicle during off-hours.

Transit modes whose statistics are insignificant when compared with other modes are addressed in an abbreviated fashion. They are Cable Car (CC), Ferryboat FB), Inclined Plane (IP), and Jitney (JT). Detailed statistics are available on request. Monorail (MO), Publico (PB), Aerial Tramway (TR), and Other (OR) modes had no reportable incidents.

**Transit Safety Trends
1990 through 2000**

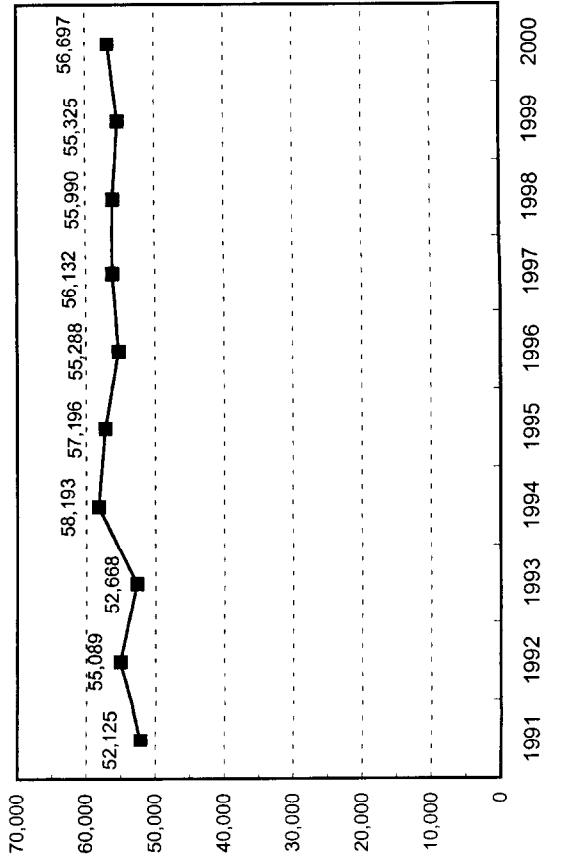

Transit Incidents by Year

Transit Fatalities by Year

Transit Injuries by Year

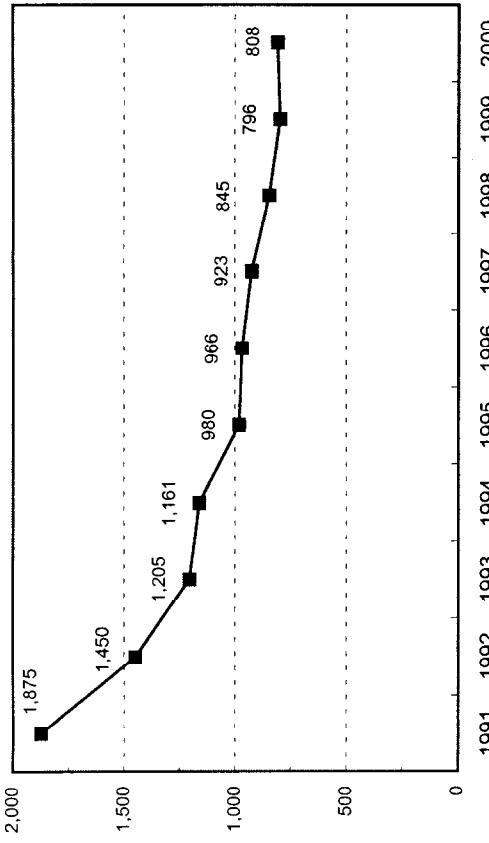

These graphs depict the trends for the total number of *incidents*, *fatalities*, and *injuries* from all causes, i.e., **Collisions**, **Derailments**, **Personal Casualties**, and **Fires**.

Note: In these trend graphs, the term **Transit** refers to the following modes:
MB, CR, HR, LR, AG, DR, VP.

Transit Accidents

per 100,000,000 Vehicle Miles
by Year

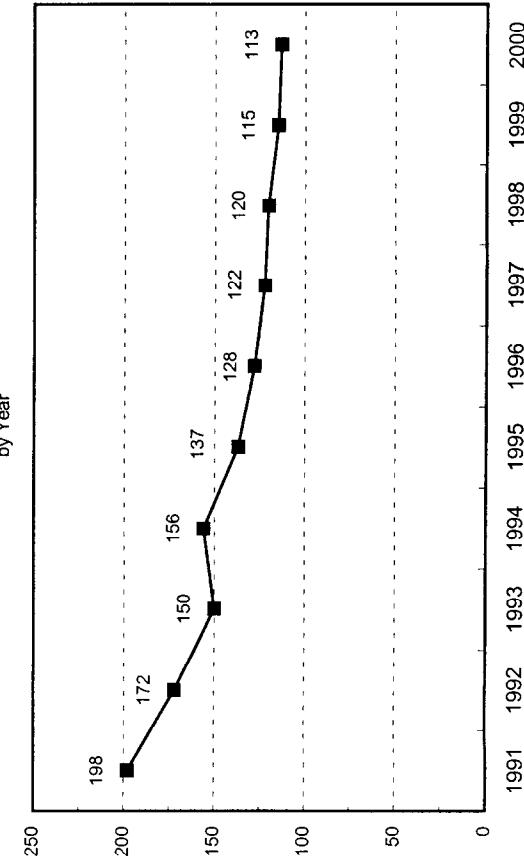

This graph shows the accident rate which is based only on the number of vehicle accidents.

These include all vehicle accidents resulting from **Collisions** [with vehicles, objects, people (not suicides)] and **Derailements** (vehicle derailed/left roadway). The vehicle mile figure includes both revenue and non-revenue miles since there are risks present during both types of operation. The three rail modes (Commuter Rail, Heavy Rail, and Light Rail) report car rather than train miles for vehicle miles.

Transit Accidents

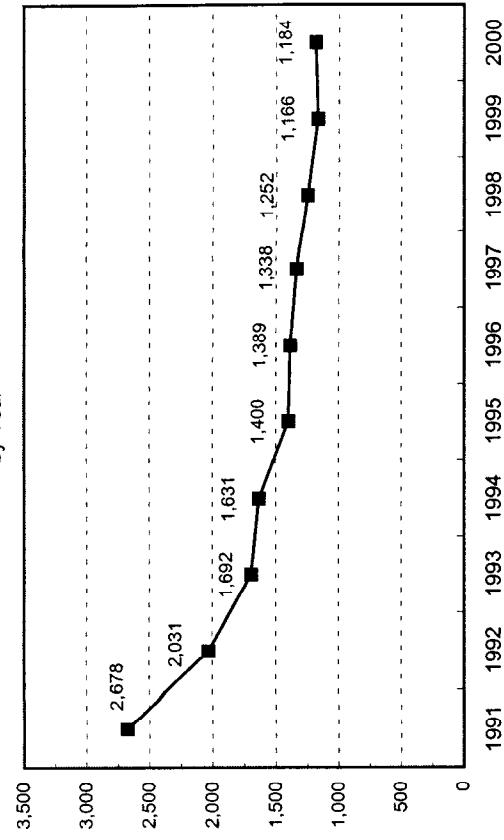

per 100,000,000 Passenger Miles
by Year

This graph shows the trend for accident (or incident) rates, which result from **Collisions** [with vehicles, objects, people (not suicides)], **Derailements** (vehicle derailed/left roadway), and **Personal Casualties** (on right of way, inside the vehicle and entering/exiting the vehicle). When analyzing the results on this page, consider that the number of passengers, and the average trip length all affect the accident rate. This graph differs from the previous graph in that it includes those **Personal Casualties** (on right of way, inside the vehicle, and entering/exiting the vehicle) associated with the operation of transit vehicles, and is indexed by **Passenger Miles**.

Bus Accidents

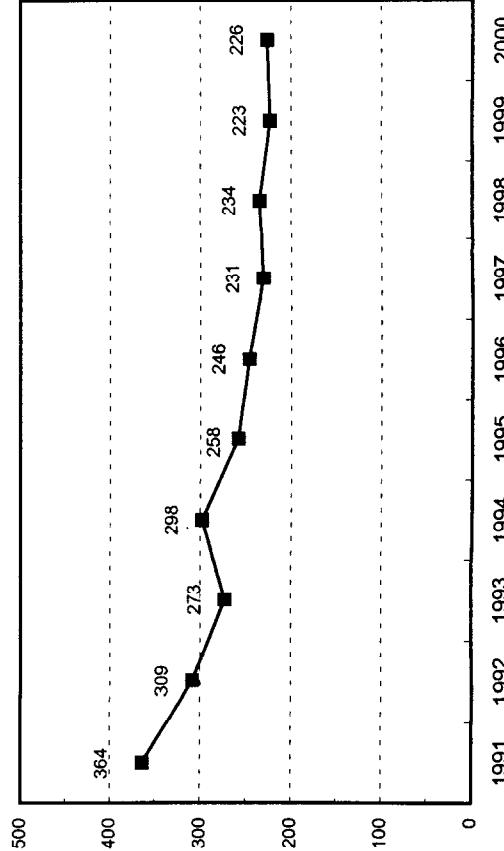

per 100,000,000 Vehicle Miles
by Year

This graph shows the accident rate which is based only on the number of vehicle accidents. These include all bus accidents resulting from **Collisions** (with vehicles, objects, people [not suicides]) and **Derailments** (bus left roadway). The vehicle mile figure includes both revenue and non-revenue miles since there are risks present during both types of operation.

Bus Accidents

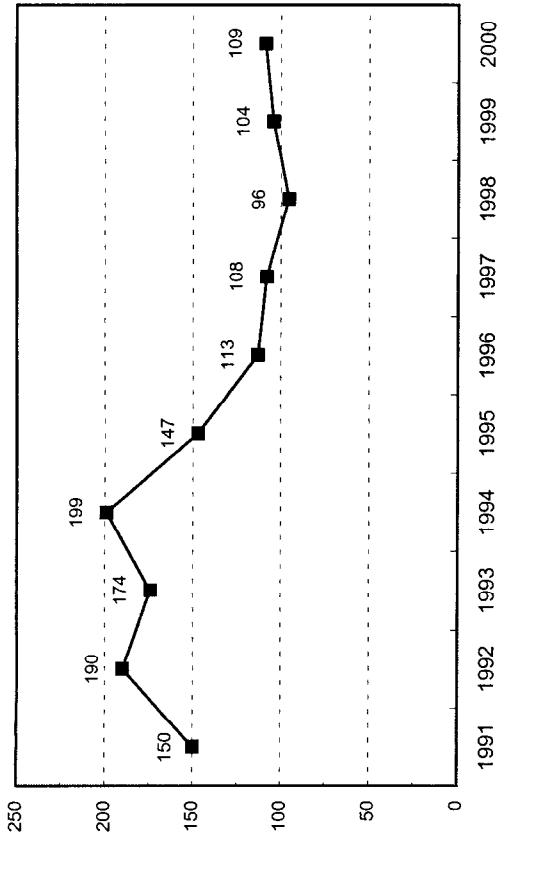

per 100,000,000 Passenger Miles
by Year

This graph shows the trend for bus accident (or incident) rates, which result from **Collisions** (with vehicles, objects, people [not suicides]), **Derailments** (bus left roadway), and **Personal Casualties** (on right of way, inside the vehicle, and entering/exiting the vehicle). When analyzing the results on this page, consider that the number of vehicle accidents, the number of passengers, and the average trip length all affect the accident rate. This graph differs from the previous graph in that it includes **Personal Casualties** (on right of way, inside the vehicle, and entering/exiting the vehicle), and is indexed by Passenger Miles.

Rail Accidents

per 100,000,000 Vehicle Miles
by Year

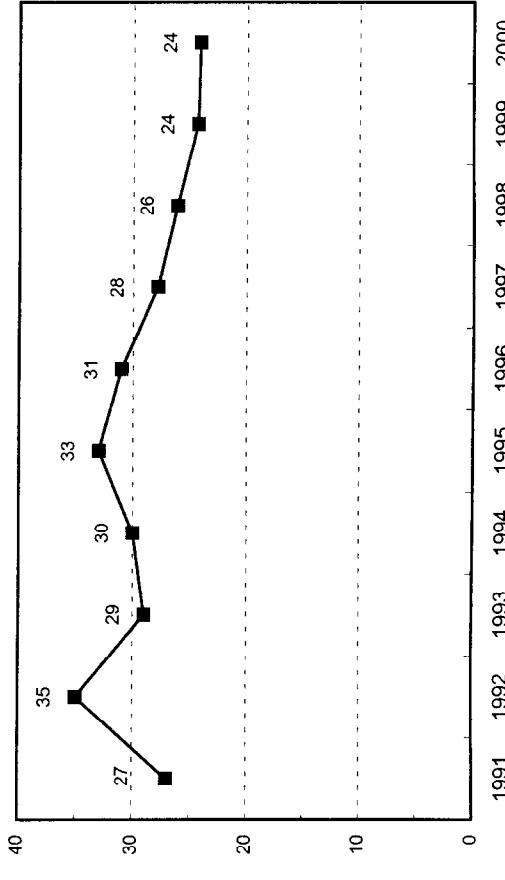

This graph shows the accident rate which is based only on the number of vehicle accidents.

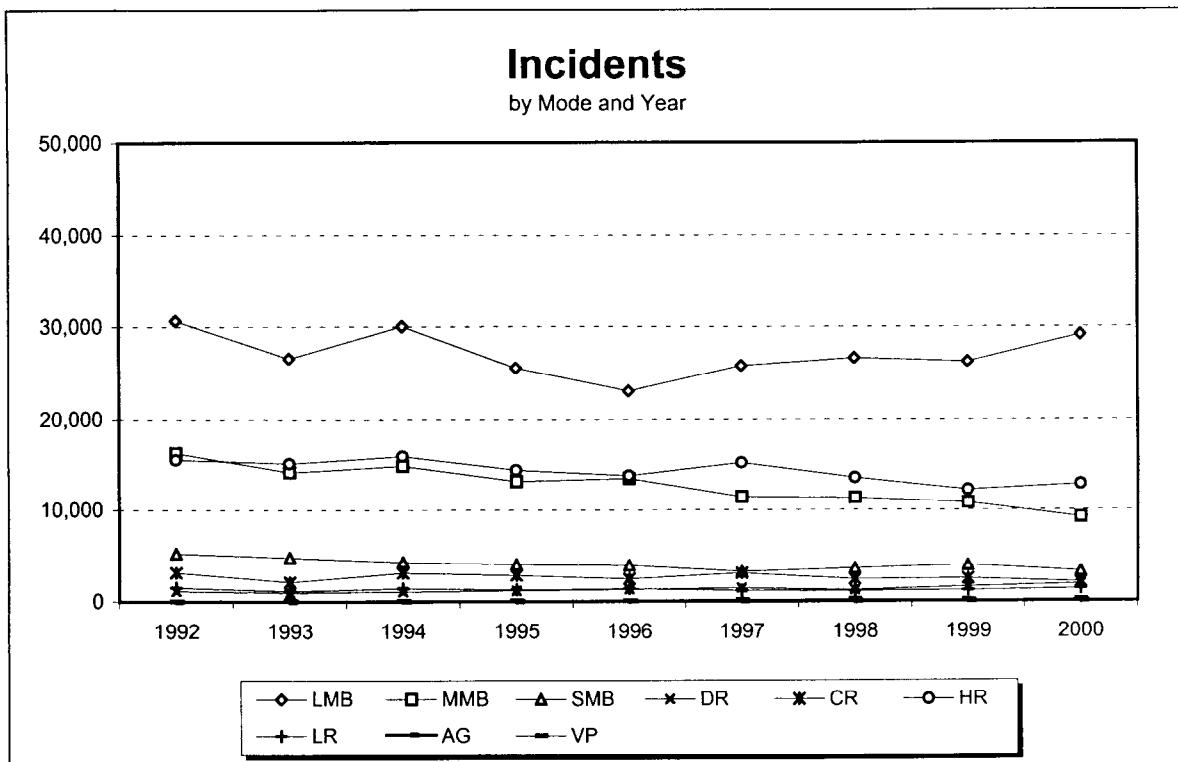

These include all rail vehicle accidents resulting from **Collisions** (with vehicles, objects, people [not suicides]) and **Derailments** (bus left roadway). The vehicle mile figure includes both revenue and non-revenue miles since there are risks present during both types of operation. The rail modes (Commuter Rail, Heavy Rail, and Light Rail) report car rather than train miles for vehicle miles.

When analyzing the results on this page, consider that the number of vehicle accidents, the number of passengers, and the average trip length all affect the accident rate. This graph differs from the previous graph in that it includes certain **Personal Casualties** (on right of way, inside the vehicle, and entering/exiting the vehicle), and is indexed by Passenger Miles.

Rail Grade Crossing Fatalities and Injuries

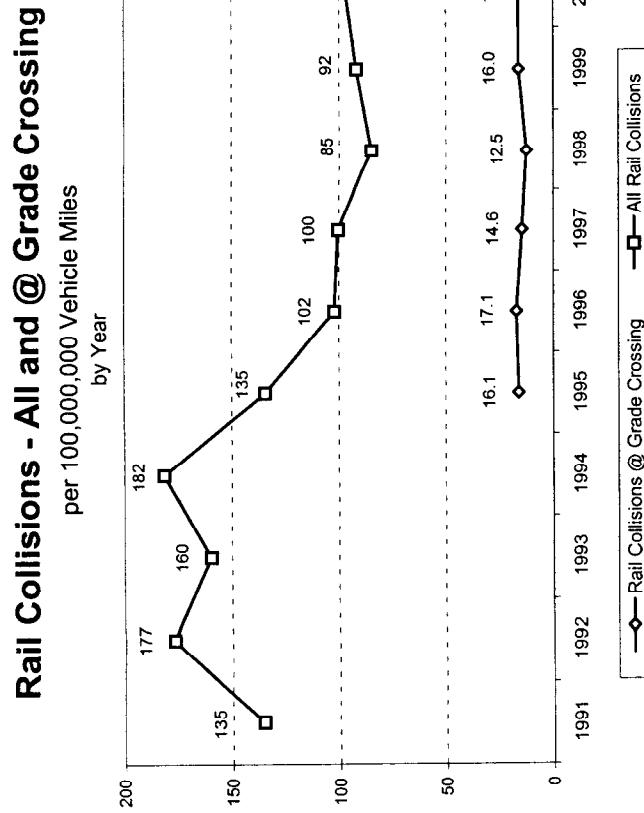

events

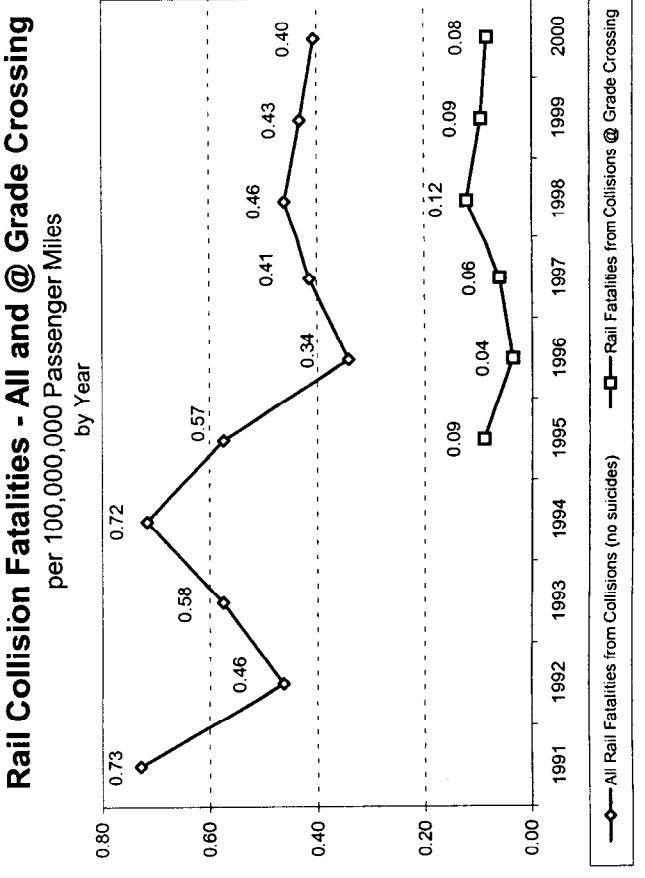

This graph shows the *fatalities* (bars) and *injuries* (lines) that occur at grade crossings. Note that the fatality scale is on the left and the injury scale is on the right side of the chart.

Note that all of the fatalities are Others (e.g., pedestrians, trespassers, etc.). The majority of injuries are also now Others, too.

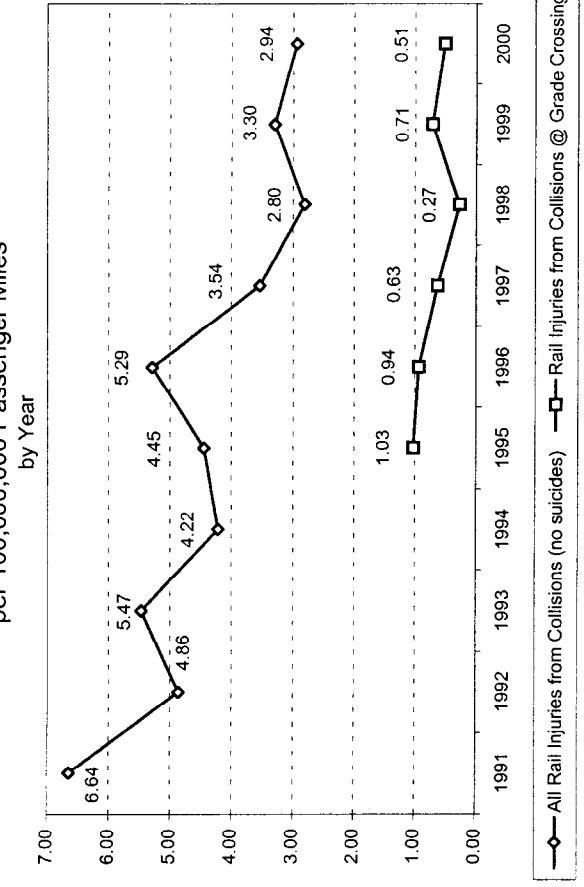

This graph shows the collision rate which is based only on the number of vehicle accidents. These include all rail vehicle accidents resulting from **Collisions** (with vehicles, objects, people [not suicides]). The Rail Collisions @ Grade Crossings rate is a subset of the All Rail Collisions rate. The vehicle-mile figure includes both revenue and non-revenue miles since there are risks present during both types of operation. The rail modes (Commuter Rail, Heavy Rail, and Light Rail) report car rather than train miles for vehicle-miles. For example, a CR locomotive and 3 cars traveling 10 miles accrues 30 vehicle-miles (locomotive not counted, only passenger cars).

These statistics represent *fatalities* resulting from all Rail **Collisions** (with vehicles, objects, people [not suicides]) and the corresponding subset of *fatalities* that occurred due to these collisions at Grade Crossings. When analyzing the results on this page, consider that the number of rail vehicle collisions, the number of passengers, and the average trip length all affect the collision rate.

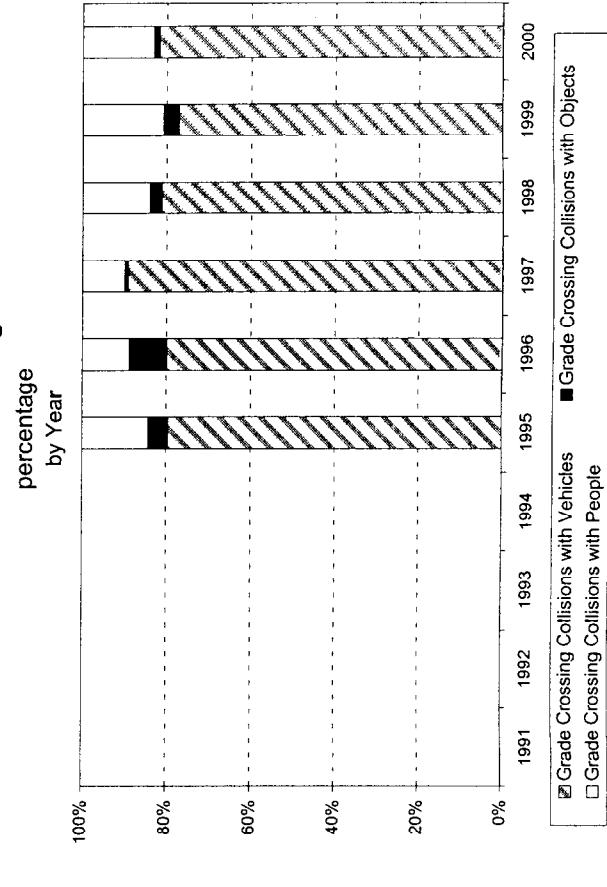

Rail Collision Injuries - All and @ Grade Crossing

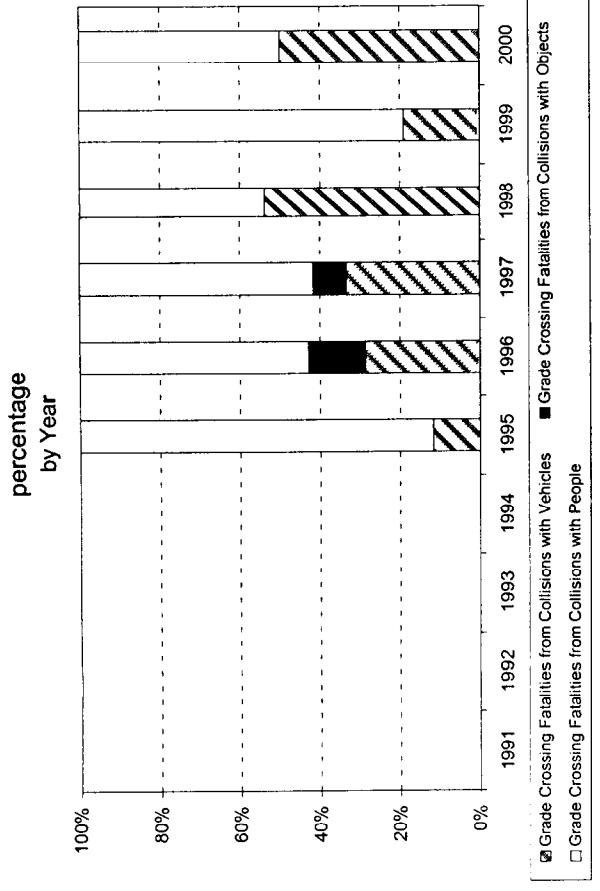

These statistics represent *injuries* resulting from all Rail **Collisions** (with vehicles, objects, people [not suicide attempts]) and the corresponding subset of *injuries* that occurred due to these collisions at Grade Crossings. When analyzing the results on this page, consider that the number of rail vehicle collisions, the number of passengers, and the average trip length all affect the collision rate.

Rail Collisions at Grade Crossings - Incident Trend

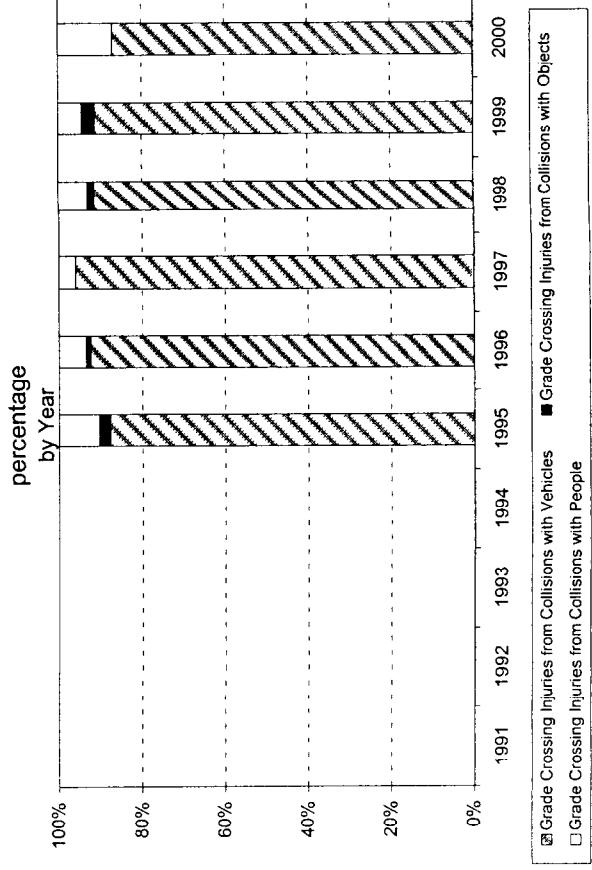

This graph shows the percentage of each type of grade crossing *incident* (i.e., Collisions with other vehicles, objects, and people) to the total **Collisions at grade crossings**.

Rail Collisions at Grade Crossings - Fatality Trend

This graph shows the percentage of each type of grade crossing *fatality* (i.e., Collisions with other vehicles, objects, and people) to the total **Fatalities at grade crossings**.

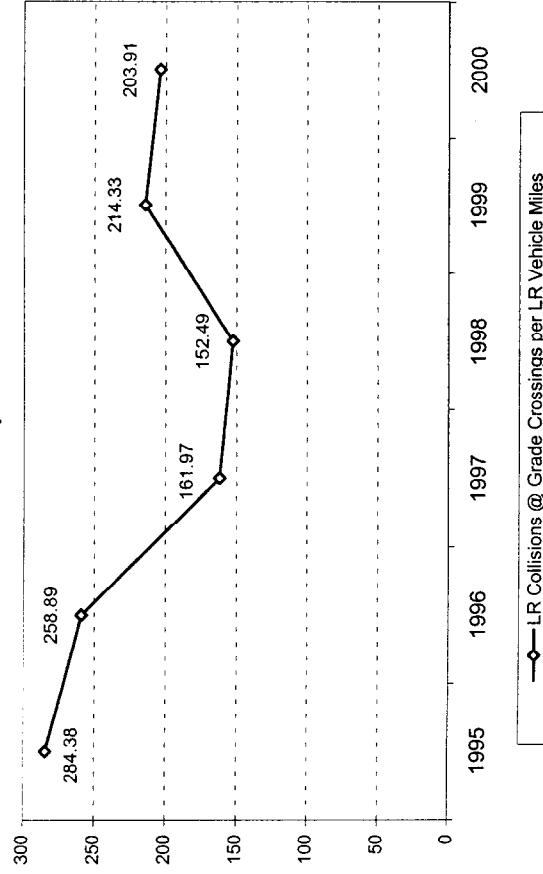

Rail Collisions at Grade Crossings - Injury Trend

This graph shows the percentage of each type of grade crossing *injury* (i.e., Collisions with other vehicles, objects, and people) to the total **Injuries at grade crossings**.

Light Rail Collisions @ Grade Crossing

per 100,000,000 LR Vehicle Miles
by Year

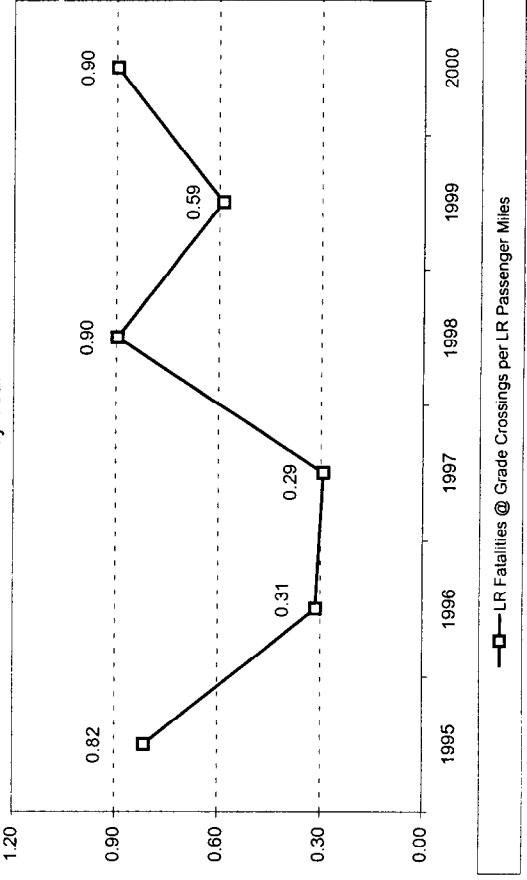

This includes light rail vehicle accidents resulting from Collisions @ Grade Crossings

by Year

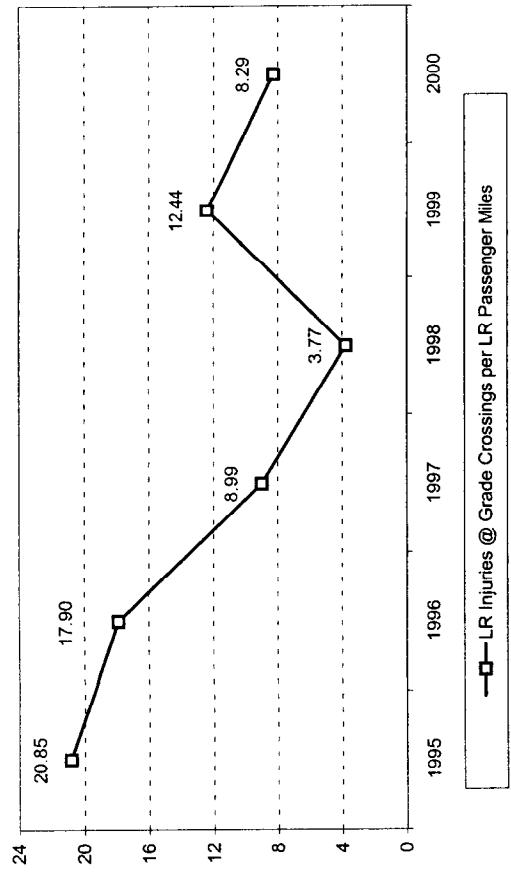

These statistics represent *fatalities* resulting from all Light Rail Collisions @ Grade Crossings

(with vehicles, objects, people). When analyzing the results on this page, consider that the number of collisions, the number of passengers, and the average trip length all affect the collision rate.

Light Rail Collision Injuries @ Grade Crossing

per 100,000,000 Passenger Miles

This graph depicts the trend for the fatality rate from **Collisions** (not including suicides) alone, the trend for total transit suicides, and the trend for fatalities from all **Personal Casualties**.

Transit Injuries

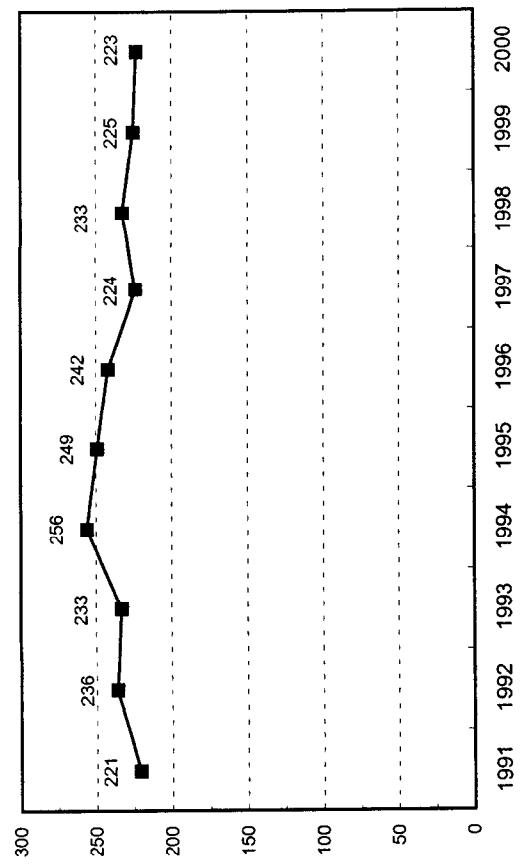

from all causes
per 100,000,000 Passengers

This graph depicts the trend for the injury rate from all causes (except suicides) listed in the **Transit Safety Form (405)**, i.e., **Collisions, Derailments, Personal Casualties, and Fires**.

Bus Injuries

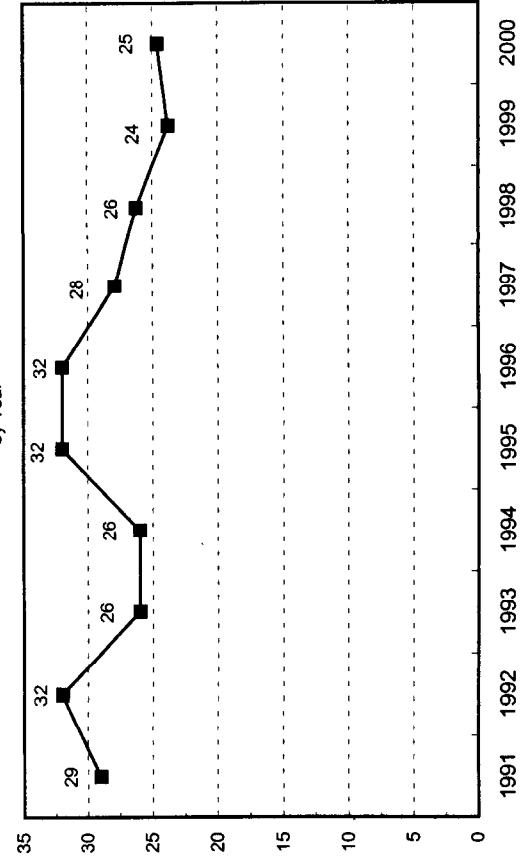

per 100,000,000 Passenger Miles
by Year

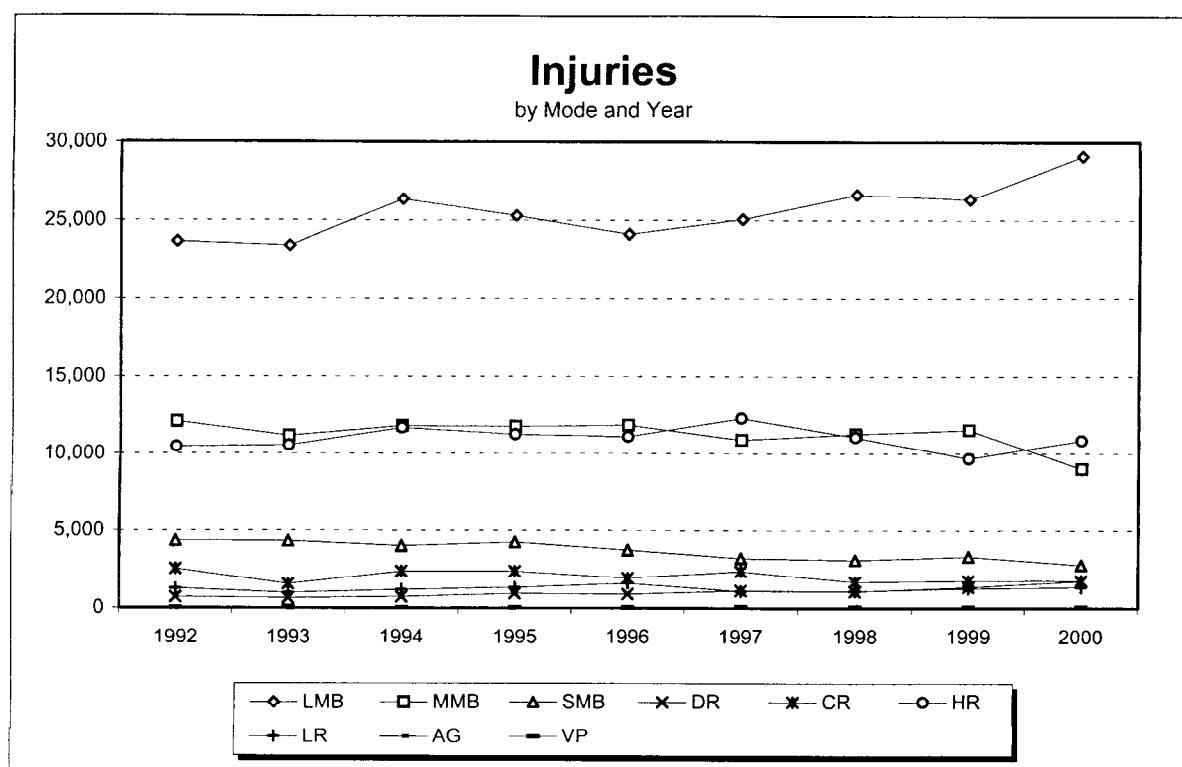

The statistics to the left represent bus *injuries* resulting from **Collisions** (with vehicles, objects, people [not suicides]), **Derailments** (vehicle left roadway), and **Personal Casualties** (on right of way, inside the vehicle, and entering/exiting the vehicle).

Accidents

Passenger Distribution

AG - Automated Guideway

CR - Commuter Rail

DR - Demand Response

LMB - Large Motor Bus

MMB - Medium Motor Bus

SMB - Small Motor Bus

HR - Heavy Rail

LR - Light Rail

VP - Vanpool

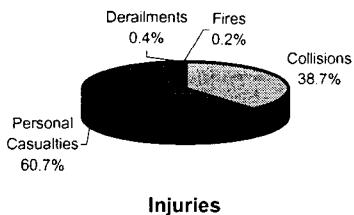

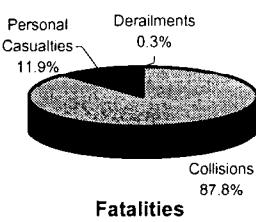

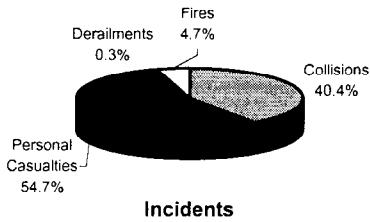

The pie chart on the left shows the percentage of accidents (or incidents) reported for each mode. The Accidents include **Collisions** (not suicides), **Derailments**, and **Personal Casualties** (inside vehicles, on right of ways, and entering/exiting vehicle) categories.

The pie chart on the right gives the percent of total transit ridership share held by each transit mode.

When compared, these pie charts provide another view of accident rates, e.g., with approximately 32% of transit passengers, Heavy Rail has only 7% of the total accidents. If all transit modes were equally safe, the pie charts would be identical.

Incidents, Fatalities, Injuries

by Cause

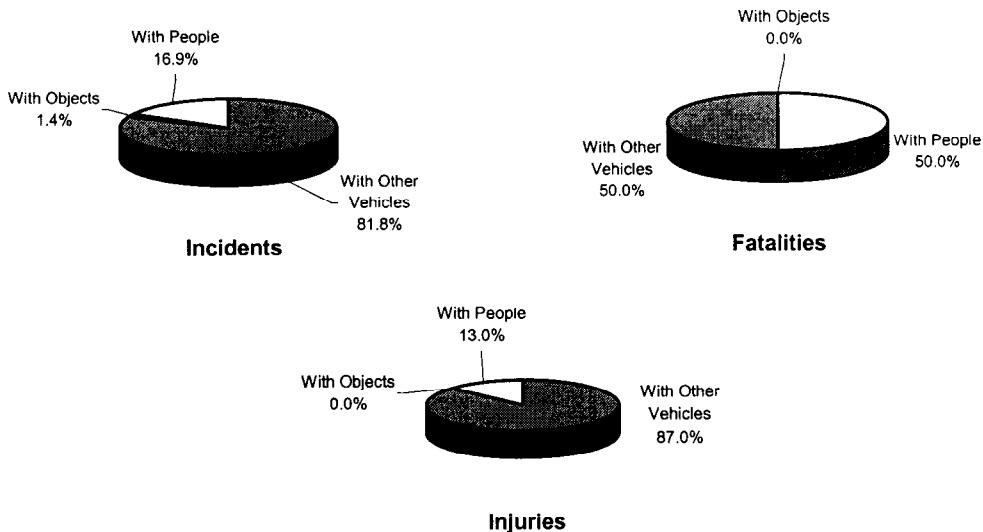

The pie chart on the left shows the percentage of *incidents* reported from each cause (**Collisions [including suicides], Derailments, Personal Casualties, and Fires**) to the total incidents from all causes.

The pie chart on the right shows the percentage of the *fatalities* and the pie chart in the middle shows the percentage of *injuries* from each cause (**Collisions [including suicides], Derailments, Personal Casualties, and Fires**) to the total.

The *fatalities* chart shows that Collisions are the single biggest contributing cause of fatalities.

Collisions at Grade Crossings

Incidents, Fatalities, Injuries by Type

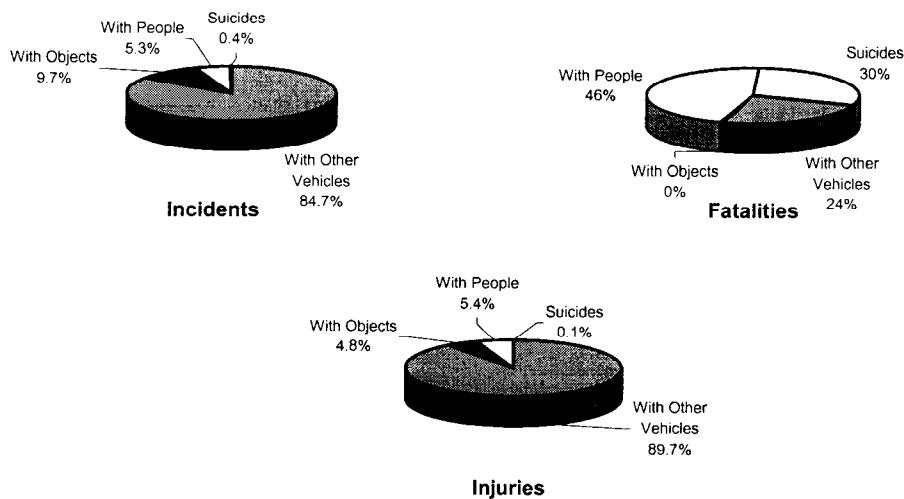

The pie chart on the left shows the percentage of each type of grade crossing *incident* (i.e., Collisions with other vehicles, objects, and people) to the total **Collisions at grade crossings**.
Collisions at grade crossings apply only to rail modes.

The pie chart on the right shows the percentage of the *fatalities*, and the pie chart in the middle shows the percentage of *injuries* from each type of **Collisions at grade crossings** (i.e., with other vehicles, objects, and people) to the total.

Comparing the three charts provides more insight into the causes of incidents, injuries, and deaths from Collisions at grade crossings; e.g., Collisions with people was a small percentage of grade crossing incidents but accounted for half of the fatalities.

Collisions

Incidents, Fatalities, Injuries
by Type

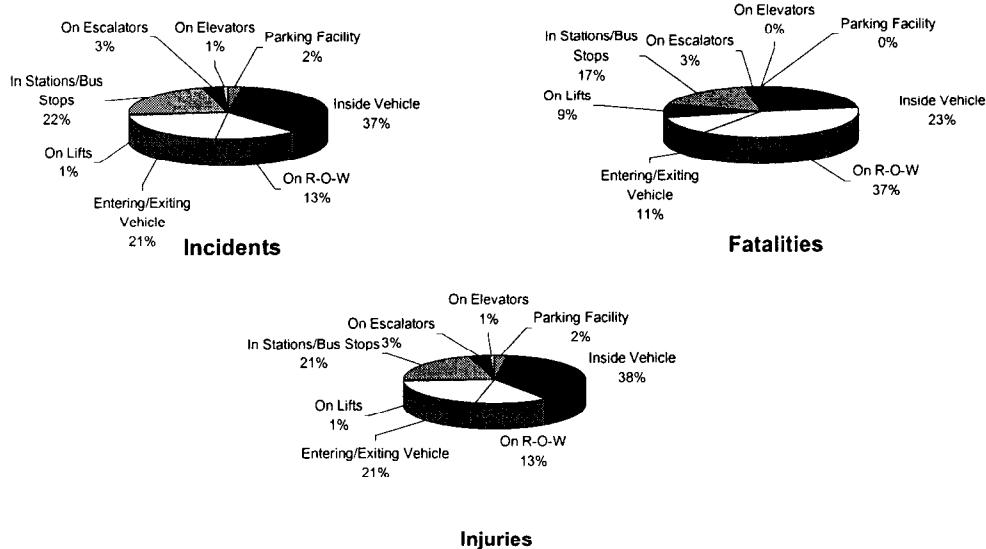

The pie chart on the left shows the percentage of each type of *incident* resulting from **Collisions** (i.e., with other vehicles, objects, and people) to the total Collision *incidents*.

The pie chart on the right shows the percentage of the *fatalities*, and the pie chart in the middle shows the percentage of *injuries* from each type of **Collision** (i.e., with other vehicles, objects, and people) to the total.

Comparing the three charts provides more insight into the causes of incidents, injuries, and deaths from Collisions.

Personal Casualties

Incidents, Fatalities, Injuries by Location

The pie chart on the left shows the percentage of each type of *incident* in the **Personal Casualties** category (in parking facilities, inside vehicles, on right of ways, entering/exiting vehicles [associated with lifts], in stations/bus stops [associated with escalators, and associated with elevators]) to the total incidents of Personal Casualties.

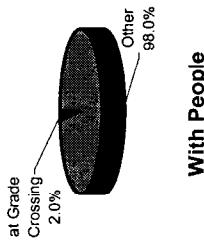

The pie chart on the right shows the percentage of *fatalities*, and the pie chart in the middle shows the percentage of *injuries* from each of these incidents.

Collision Fatalities

by Location

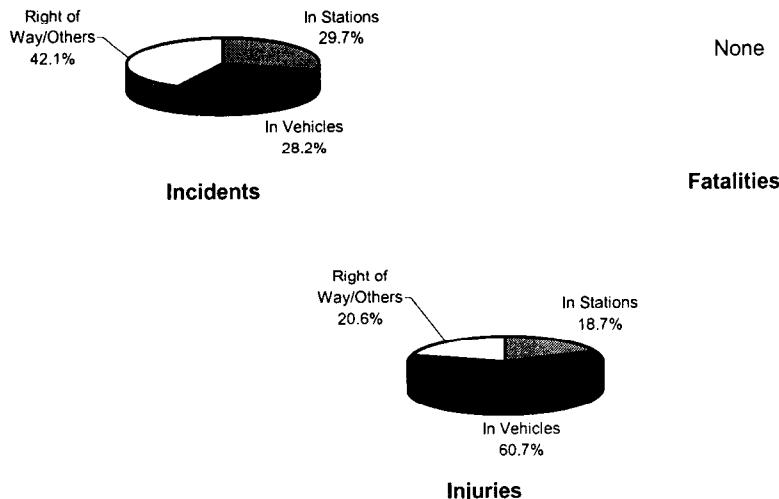

In each of the charts, the pie on the left shows the percentage of **Collisions with other vehicles at grade crossings** to the total Collisions with vehicles. The pie on the right is the percentage of **Collisions with objects at grade crossings** to the total Collisions with objects. The pie in the middle shows the percentage of **Collisions with people at grade crossings** to the total Collisions with people (excluding suicides).

Each set of three charts show a relatively low percentage of incidents, fatalities, and injuries at grade crossings. However, fatalities occurring in **Collisions with other vehicles at grade crossings** was up to 13.9% of the total despite representing less than 1% of total Collision with other vehicles incidents.

Fires

Incidents, Fatalities, Injuries by Location

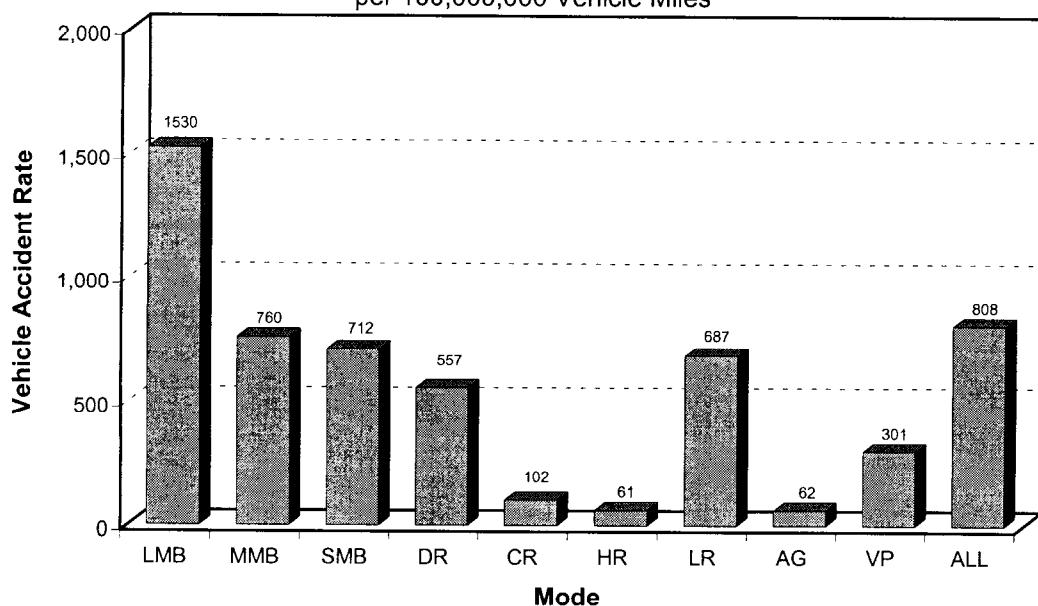

The pie chart on the left shows the percentage of each type of **Fire incident** (in vehicles, in stations, and on right of way and others) to the total incidents of Fires.

Comparing the charts provides more insight into the types of Fires and the causes of injuries from them, e.g., a fire inside the vehicle (the smallest percentage of fire incidents) resulted in more injuries than a fire on the road or in a station/bus stop. The most recent fatality as a result of Fire occurred in 1998.

Accidents

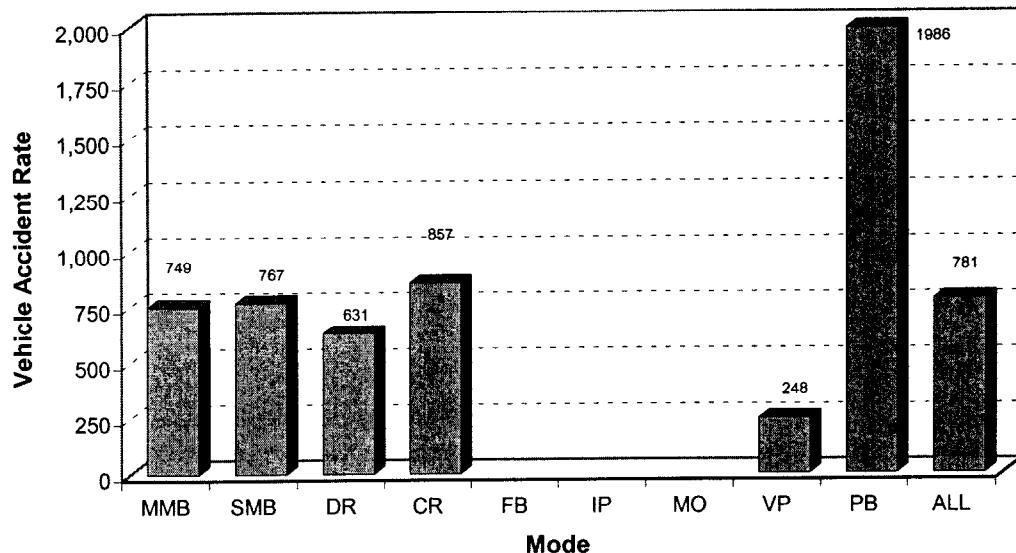

per 100,000,000 Vehicle Miles

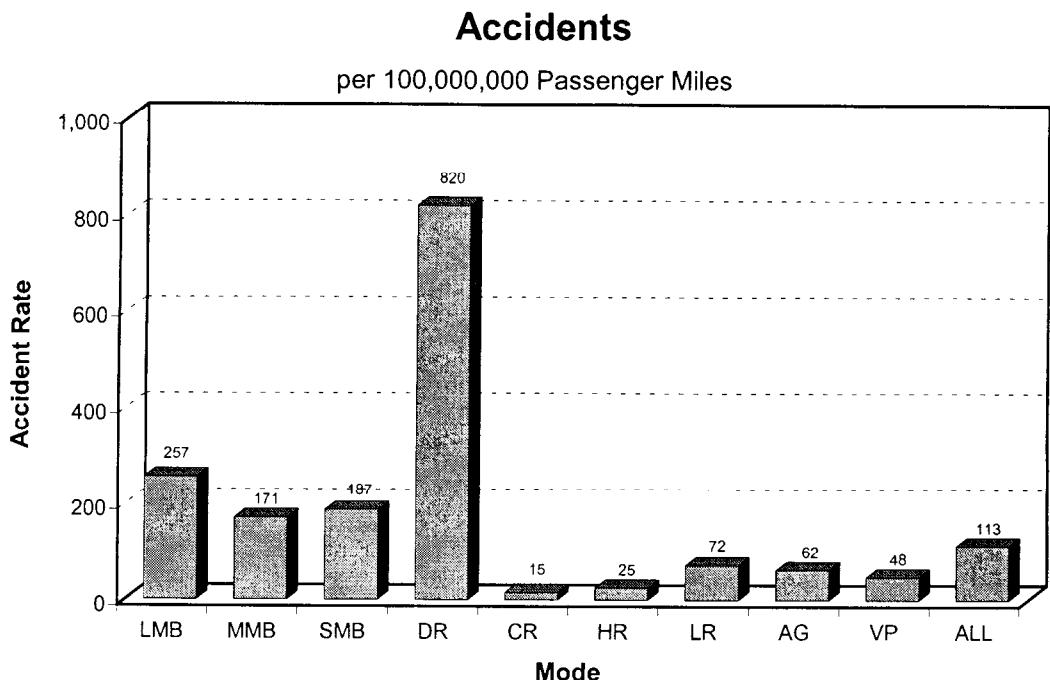

The graph shows the accident rate which is based on the number of vehicle accidents only. These include all vehicle accidents resulting from **Collisions** (with vehicles, objects, people [not suicides]) and **Derailments** (vehicle derailed/left roadway). The vehicle mile figure used includes both revenue and non-revenue miles since there are risks present during both types of operation. The three rail modes (Commuter Rail, Heavy Rail, and Light Rail) report car rather than train miles for vehicle miles.

Purchased Transportation - Accidents

When analyzing the results on this page, consider that the number of vehicle accidents, the number of passengers, and the average trip length all affect the accident rate. This graph differs from the previous page in that it also includes **Personal Casualties** (on right of way, inside the vehicle, and entering/exiting the vehicle), and is indexed in Passenger Miles.

Purchased Transportation - Accidents

This graph shows the rates of *incidents*, *injuries*, and *fatalities* (except attempted/successful suicides) for the **Collisions** category of Form 405.

The rates show how often incidents, fatalities, and injuries occur as a result of Collisions with respect to the number of passengers carried. These rates should be considered when looking at the Collision figures (stacked bar charts), which provide only raw numbers. The raw numbers alone do not provide a full picture of relative safety without data on exposure, which is provided here.

Personal Casualties

per 100,000,000 Passengers

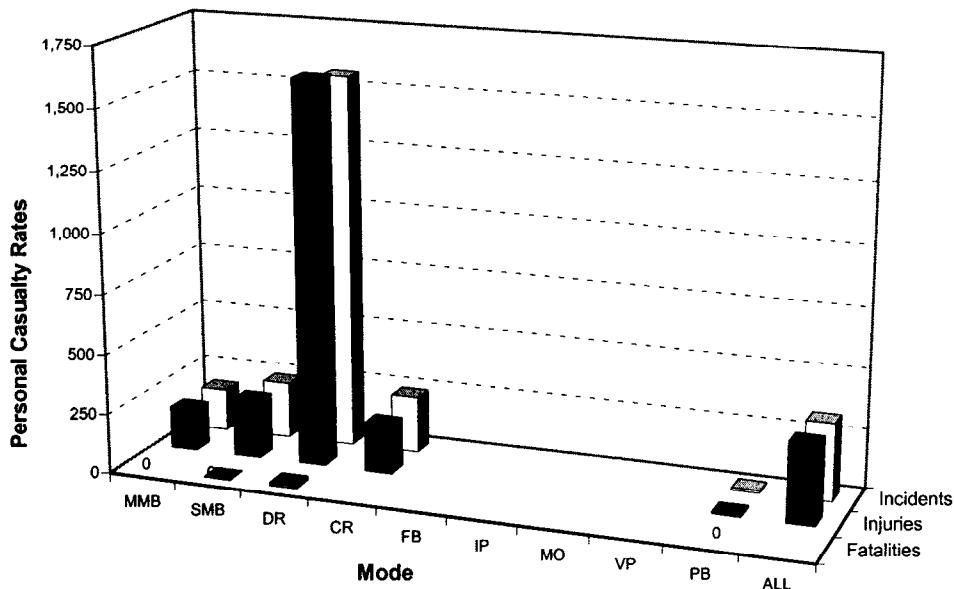

This graph provides the rates by transit mode for *incidents*, *fatalities*, and *injuries*, classified under the **Personal Casualties** category of Form 405.

Keep in mind that **Personal Casualties** is a transit mishap category where people are hurt but not as a result of Collisions, Derailments, or Fires. Incidents of Collision

Fatalities Resulting from Collisions

Injuries Resulting from Collisions

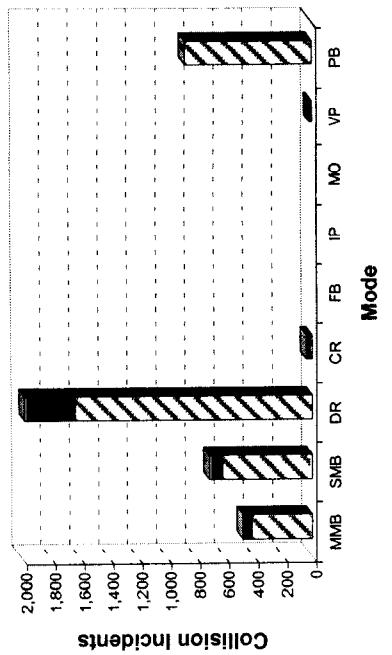

These graphs break down by type *incidents, injuries, and fatalities* resulting from **Collisions** (with vehicles, objects, people, and suicides).

In 2000, *suicide fatalities* were up significantly in the Light Rail mode (+100%) from 1999 totals. *Fatalities* were up again in the Light Rail mode (+69%) in 2000 over 1999, after a moderate drop from 1998 to 1999. They are up significantly from the lows of 1996 and 1997. Light Rail *fatalities* in 2000 also include 6 patrons where there was only 1 patron fatality in the 1996-1998 period. This is likely a reflection of new and expanding Light Rail systems nationwide.

Note that the Motor Bus categories refer to the size of the agency's fleet as opposed to the size of the vehicles. See glossary for details.

**Transit Security Trends
1996 through 2000**

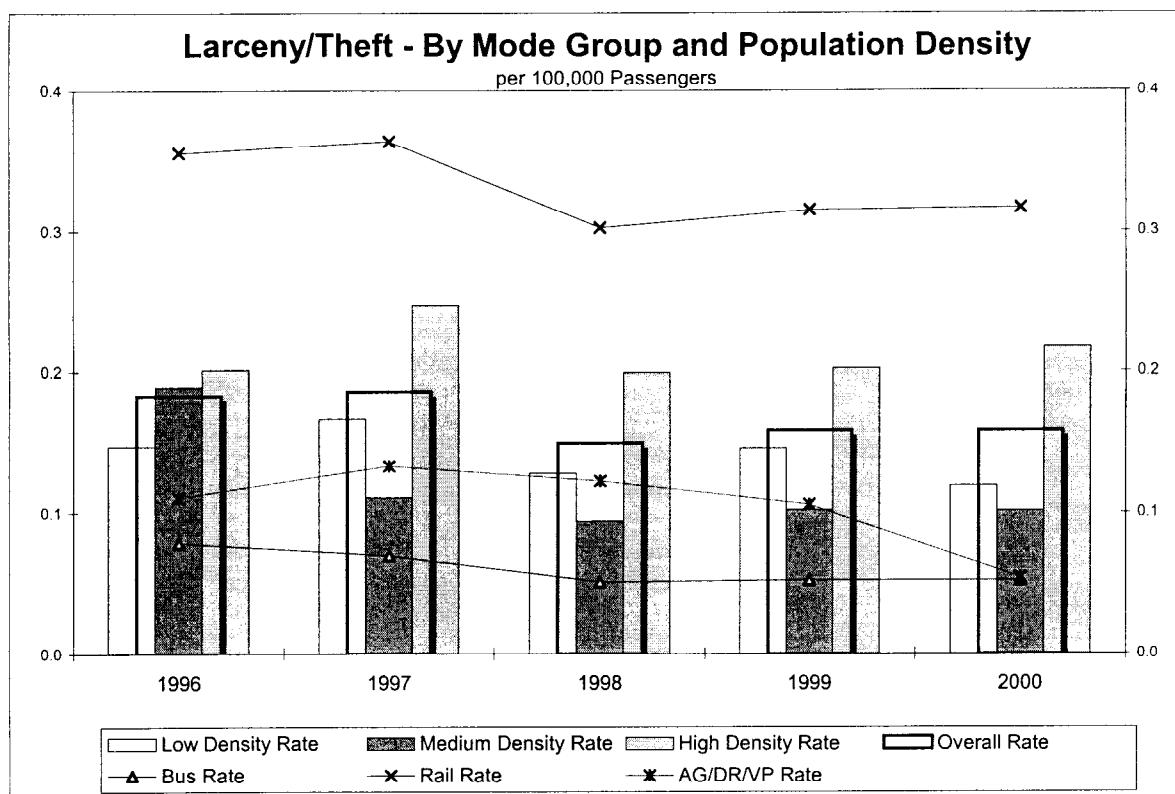

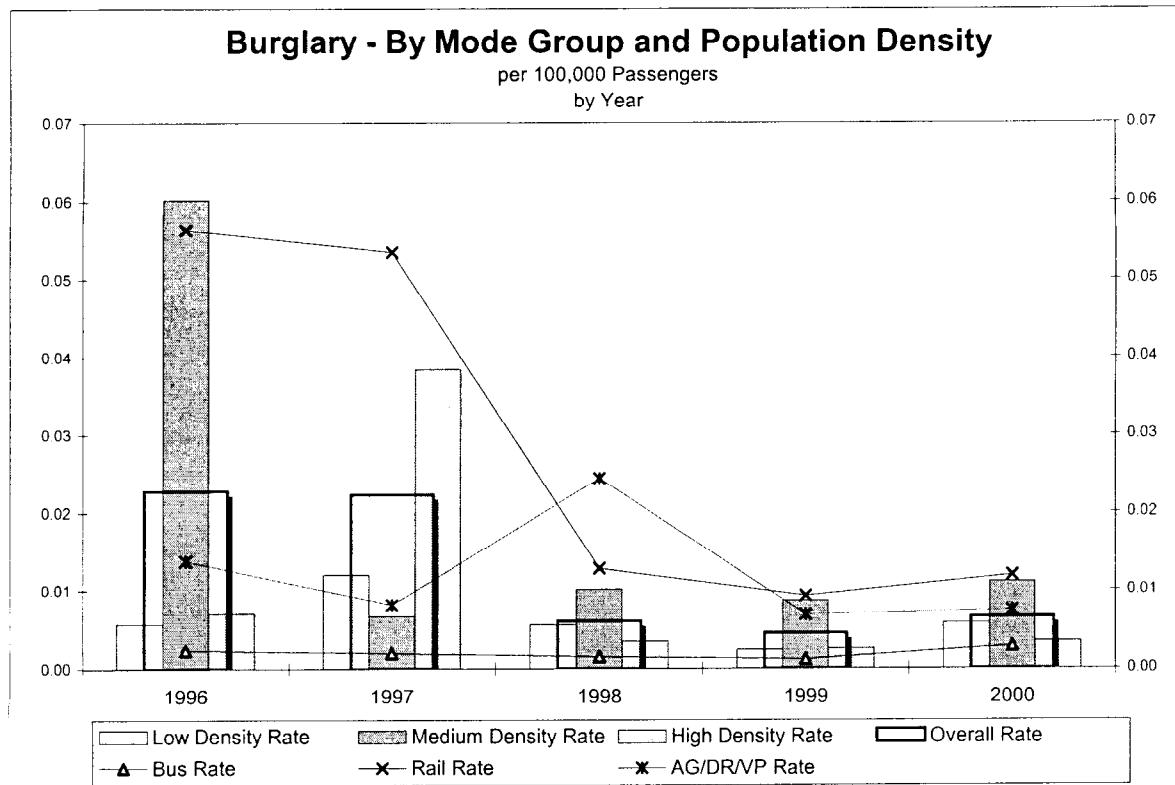

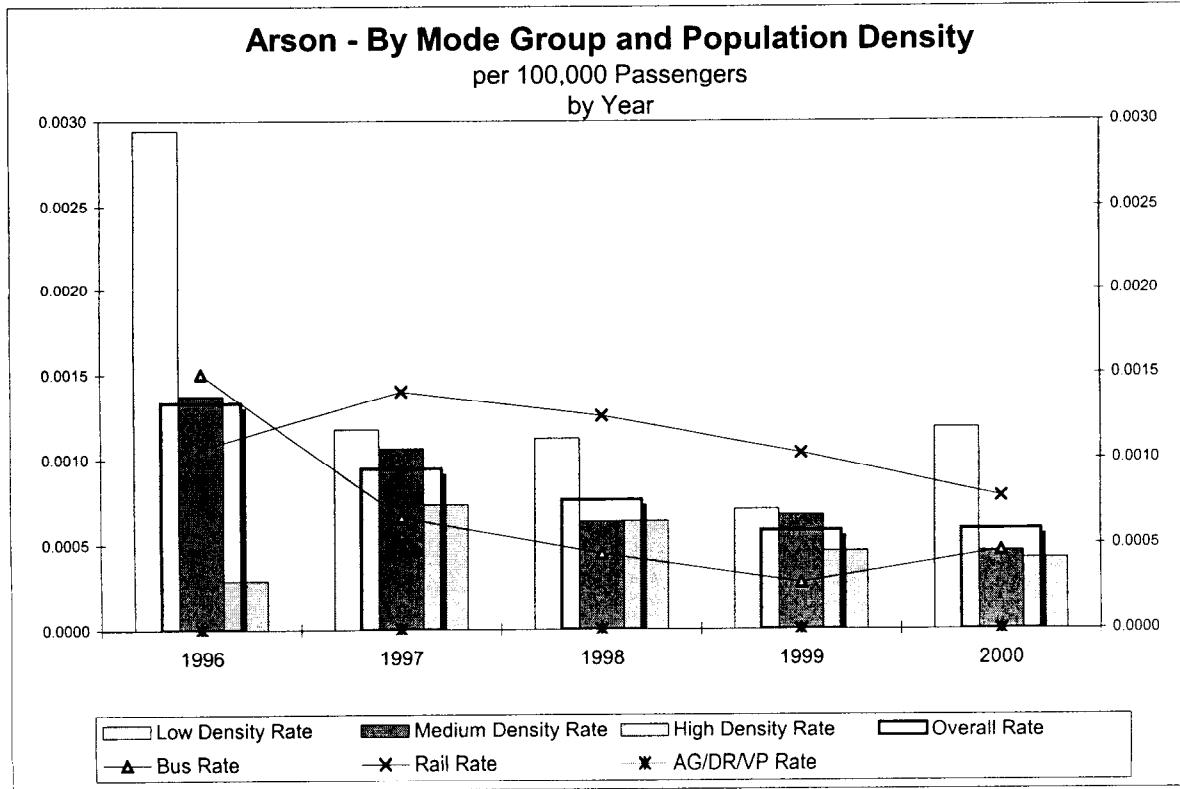

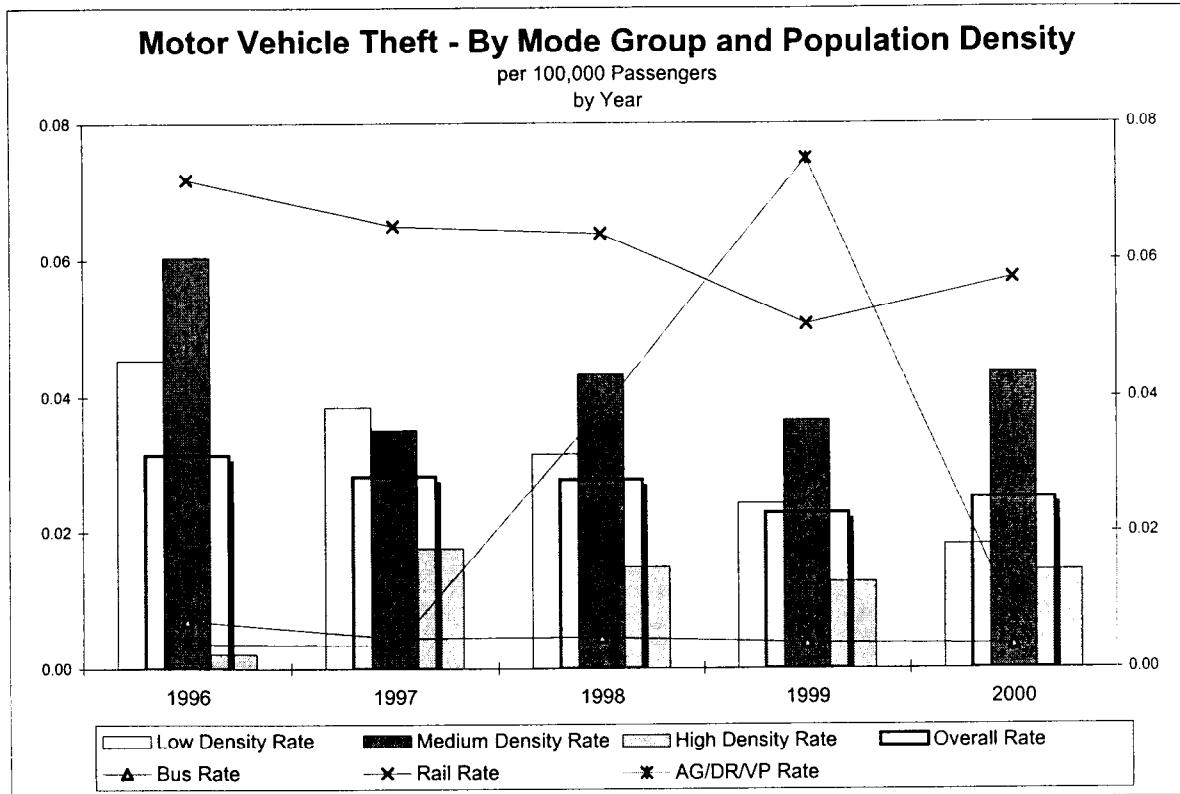

This chart displays the transit-related crime rate for Part I (Reports) Offenses. There are two sets of indicators: population density (colored bars) and mode group (lines). The overall rate is represented by the clear bars. The chart is useful in exposing the overall trend and a variety of factors that are influencing the trend.

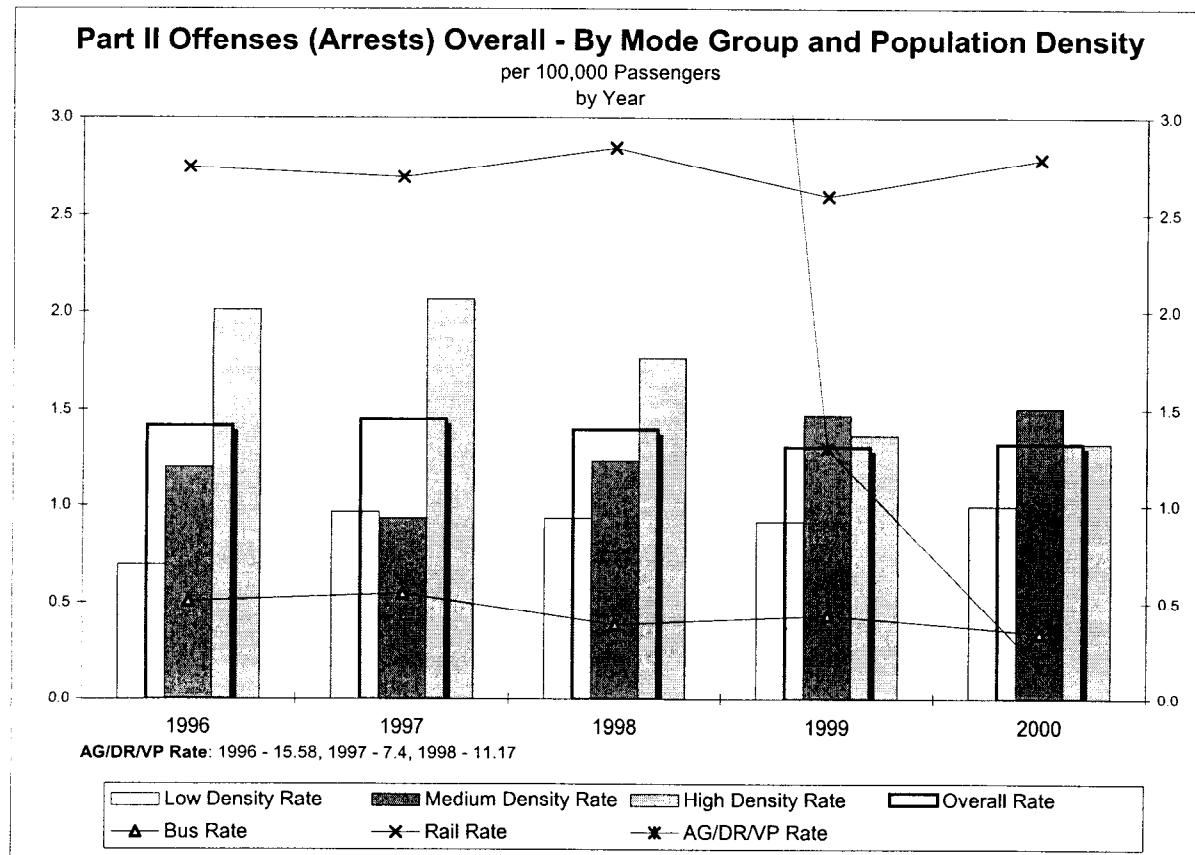

The charts that follow display the specific Part I Offense trends. Taken separately they provide insight into the factors that influenced the cumulative overall, density, and mode group trends seen above.

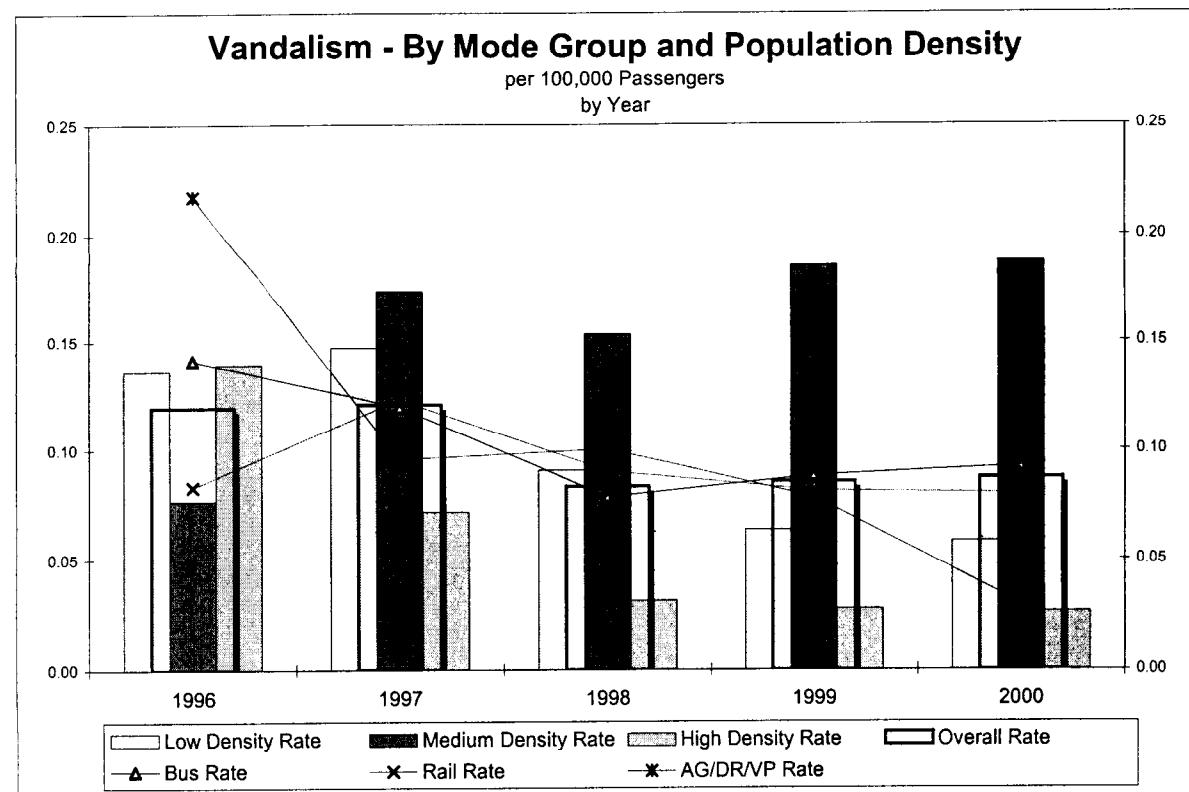

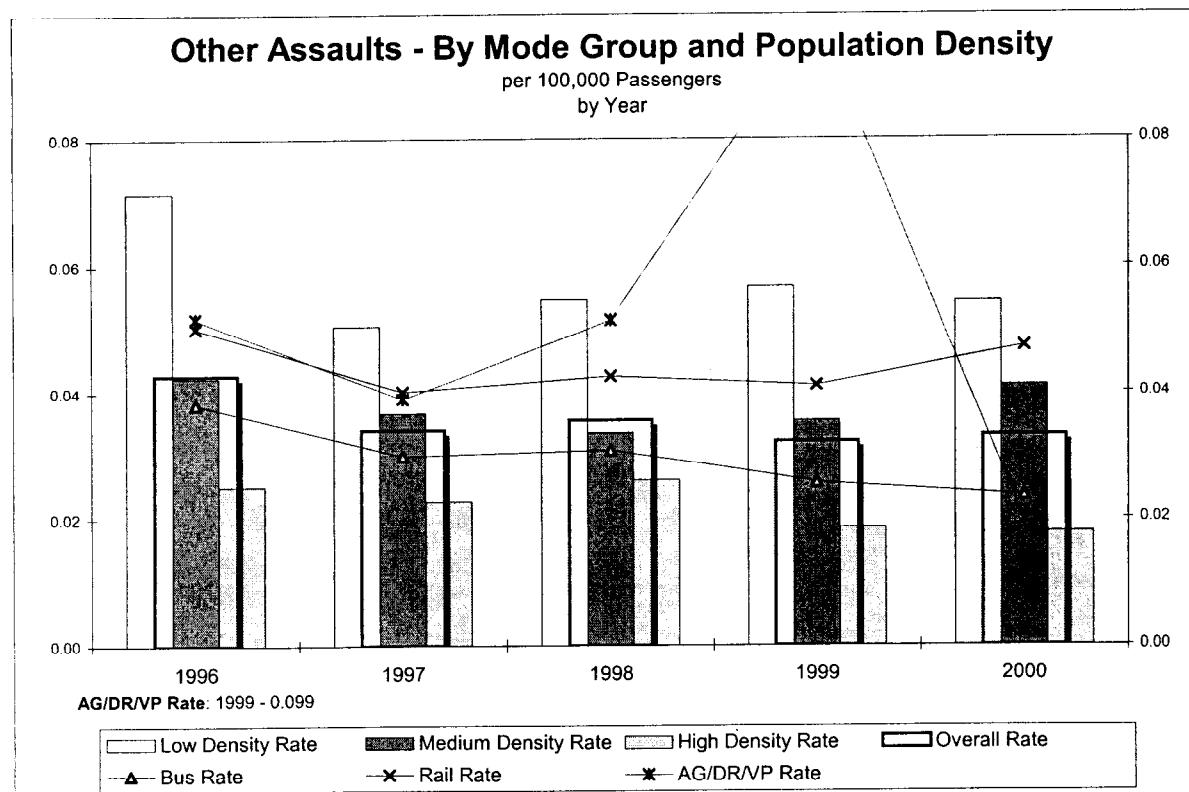

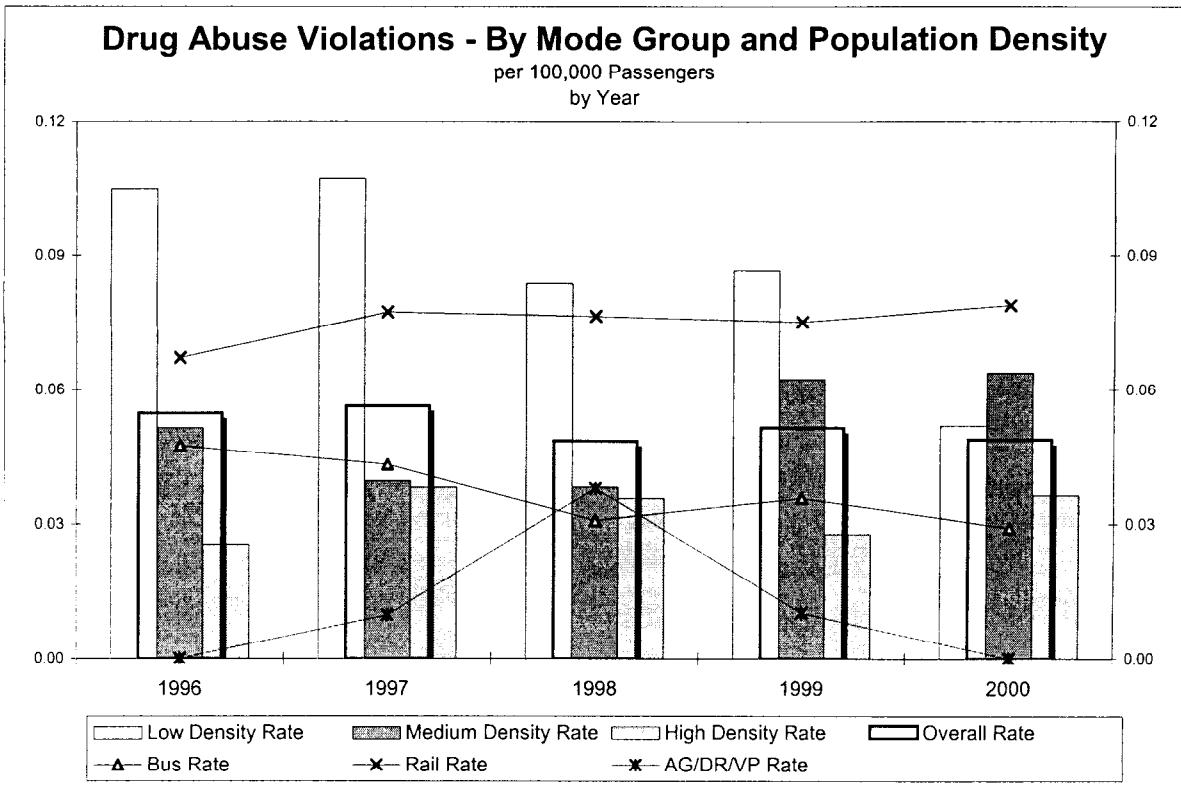

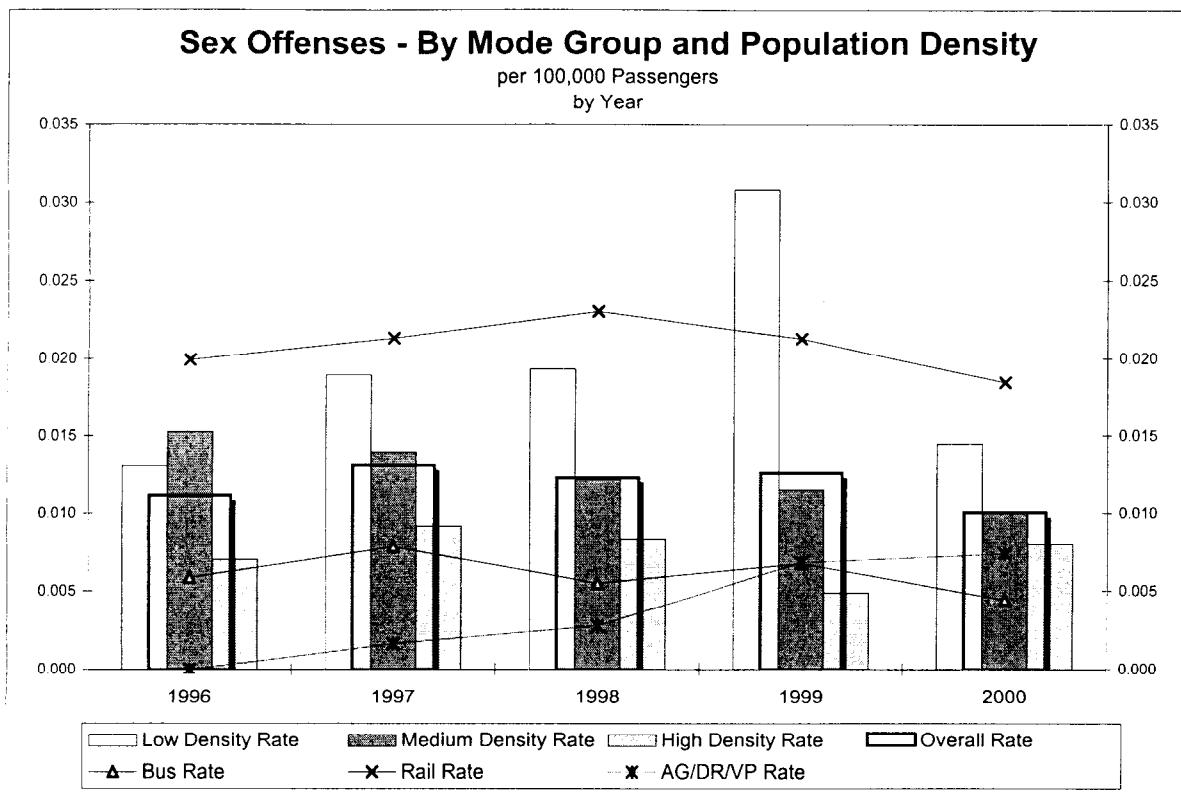

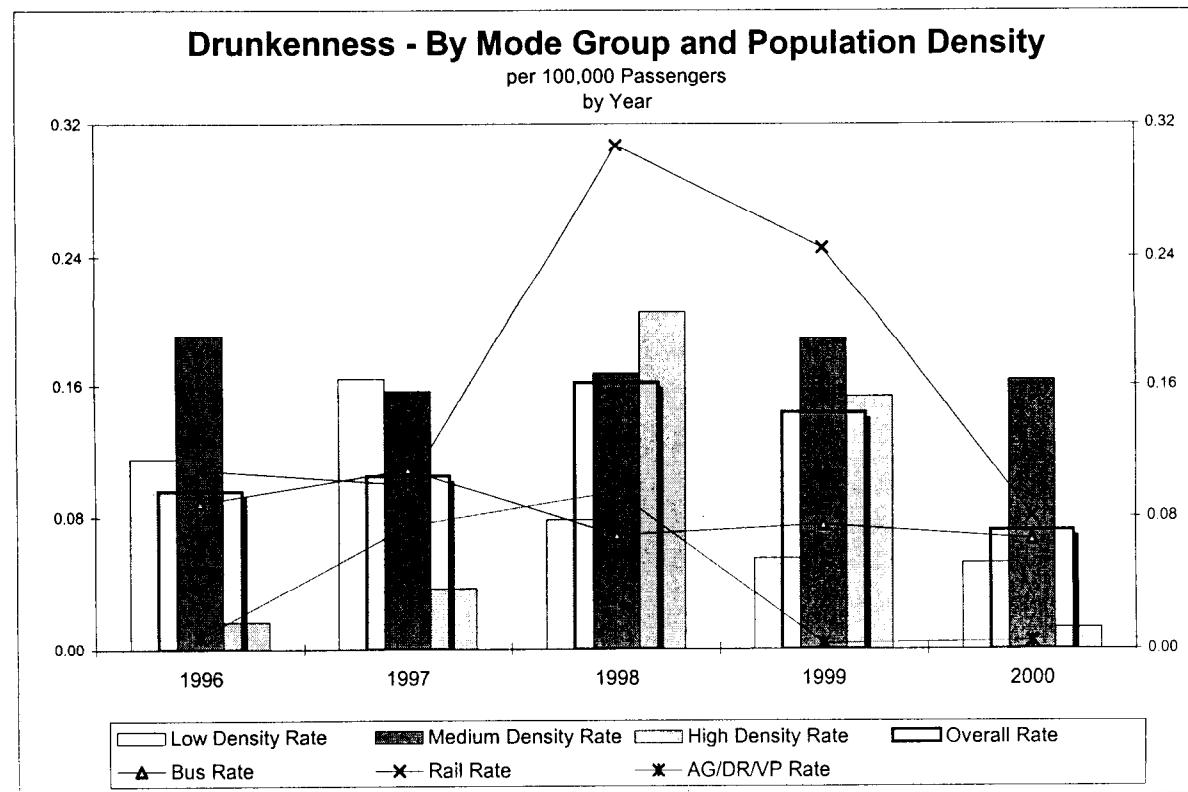

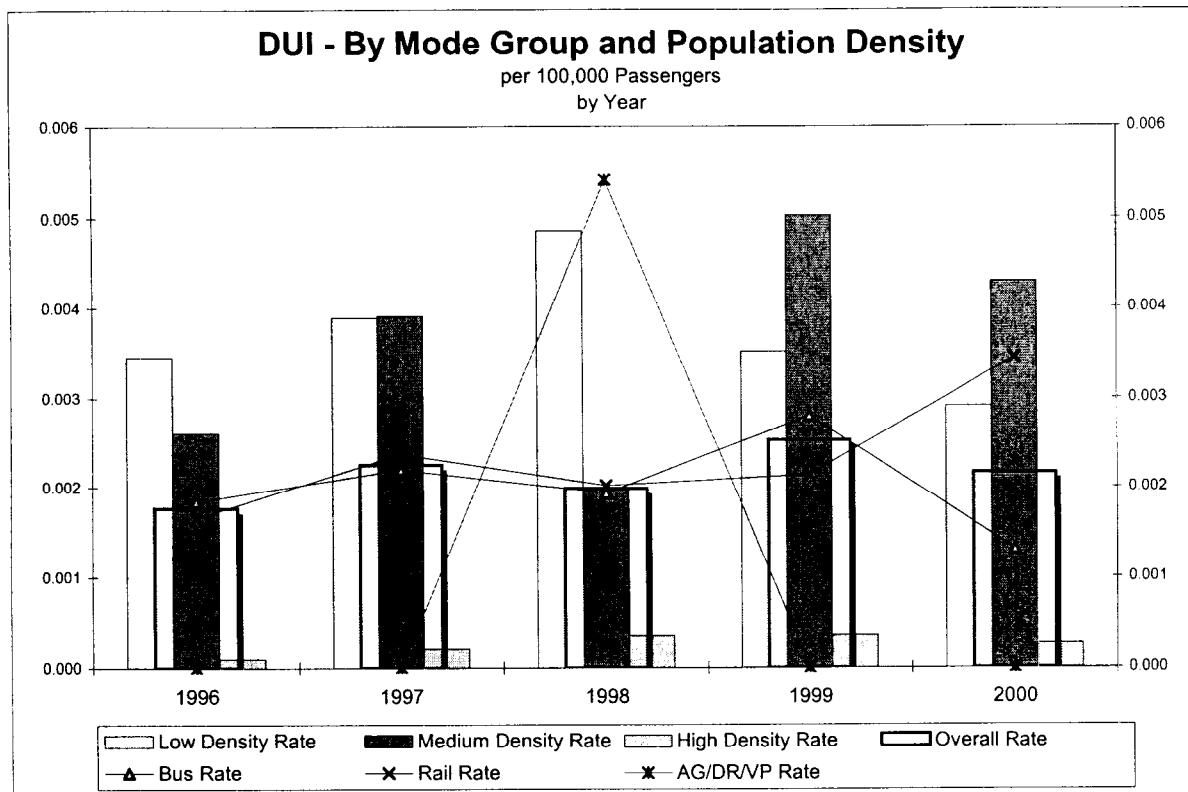

This chart displays the transit-related crime rate for arrests for Part II Offenses. There are two sets of indicators: population density (colored bars) and mode group (lines). The overall rate is represented by the clear bars. The chart is useful in exposing the overall trend and a variety of factors that are influencing the trend.

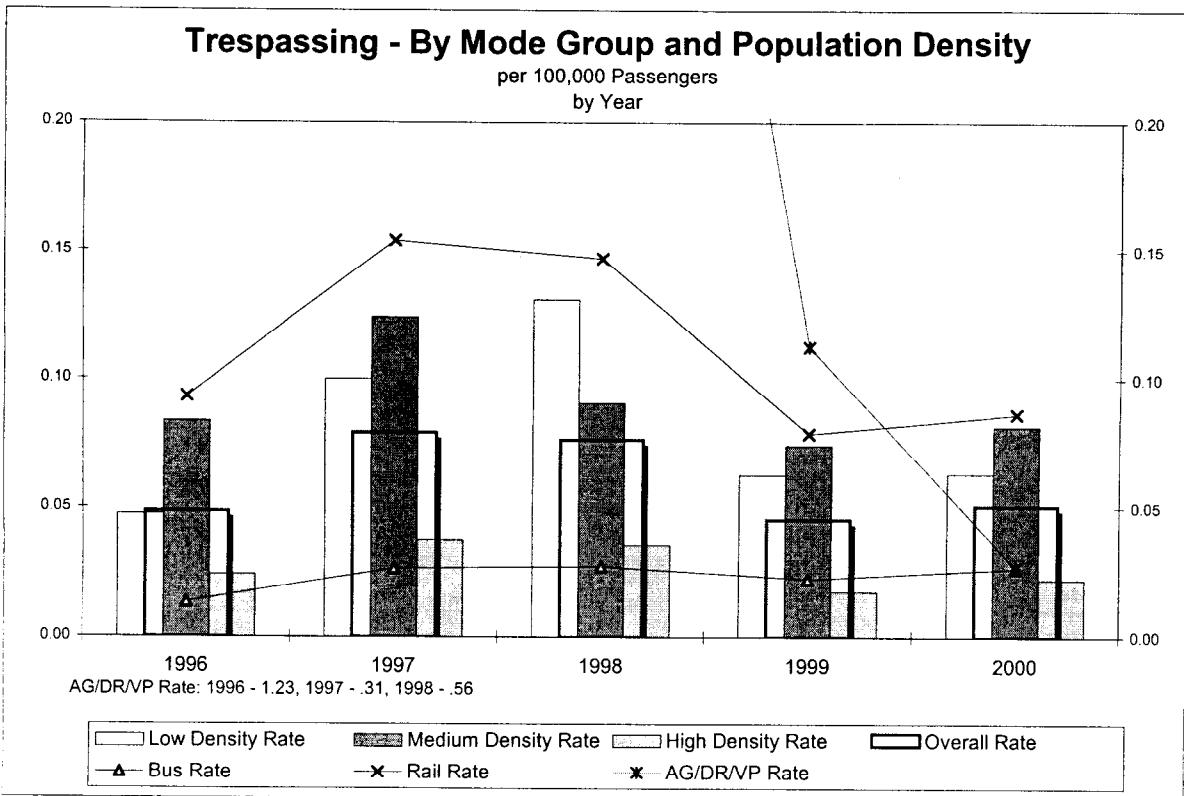

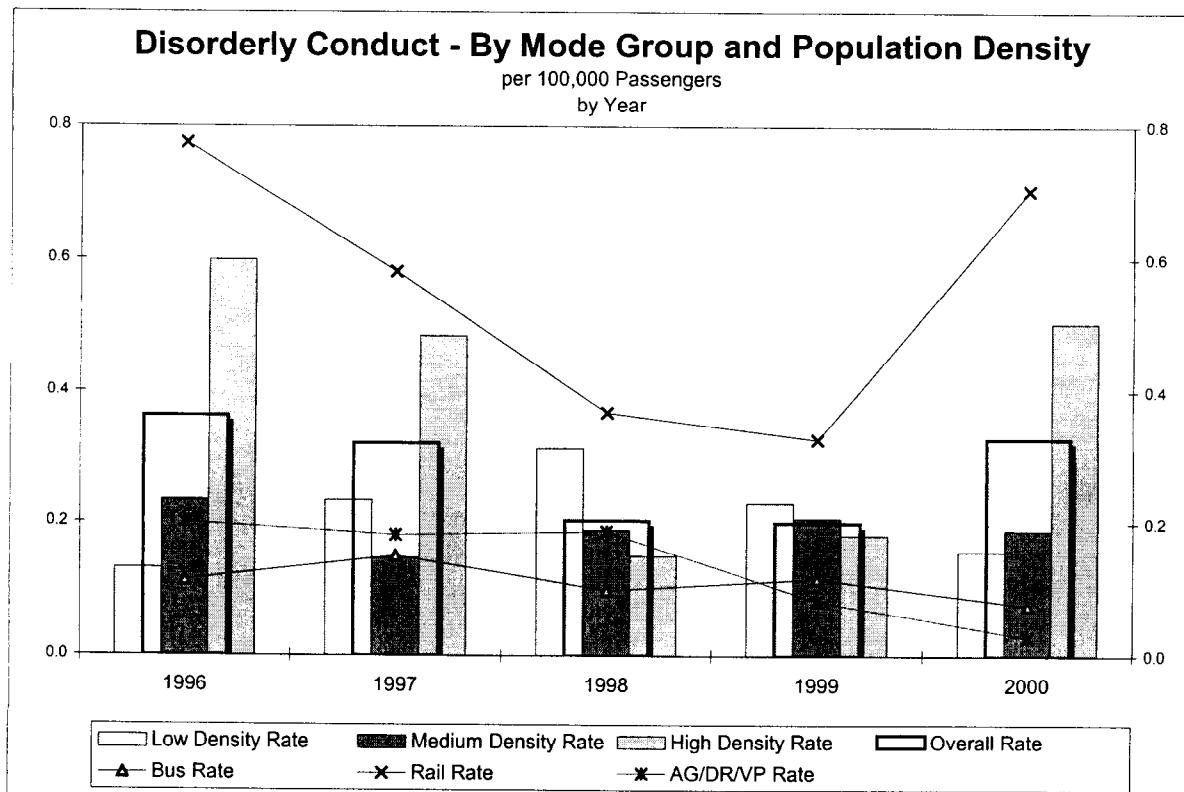

The charts that follow display the specific Part II Offense trends. Taken separately they provide insight into the factors that influenced the cumulative overall, density, and mode group trends seen above.

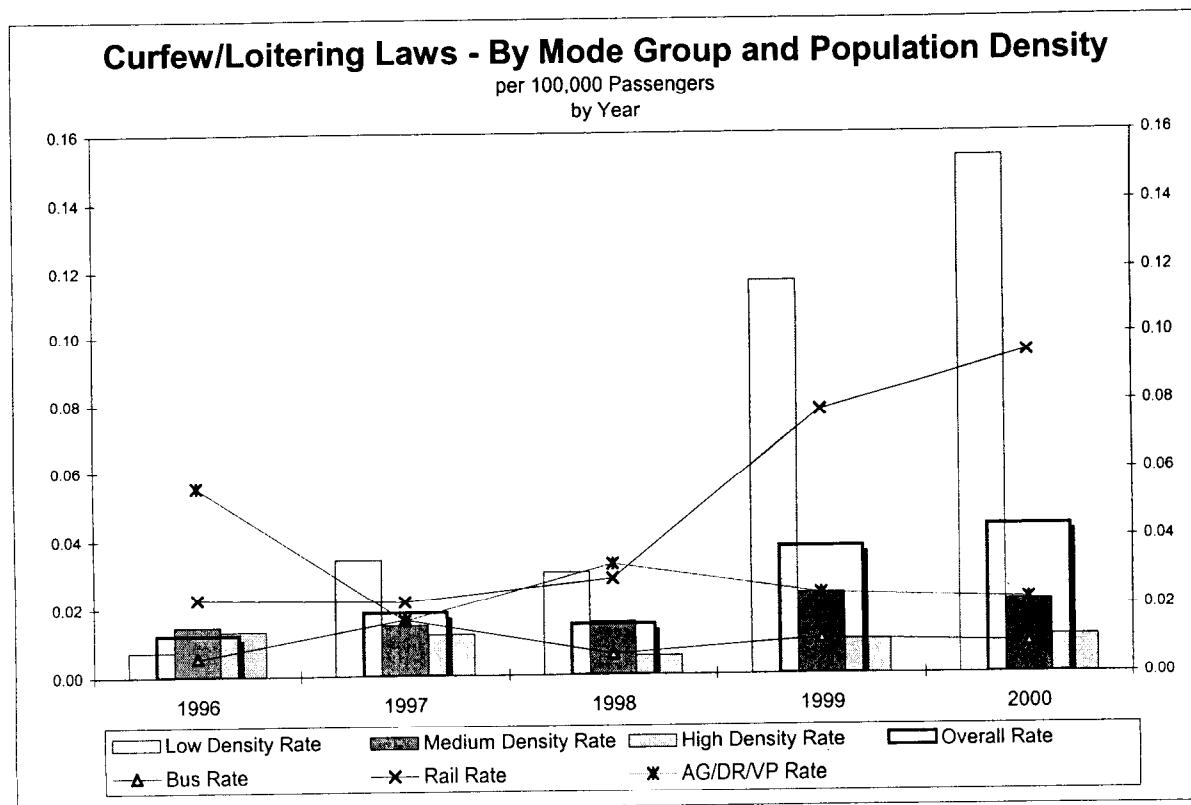

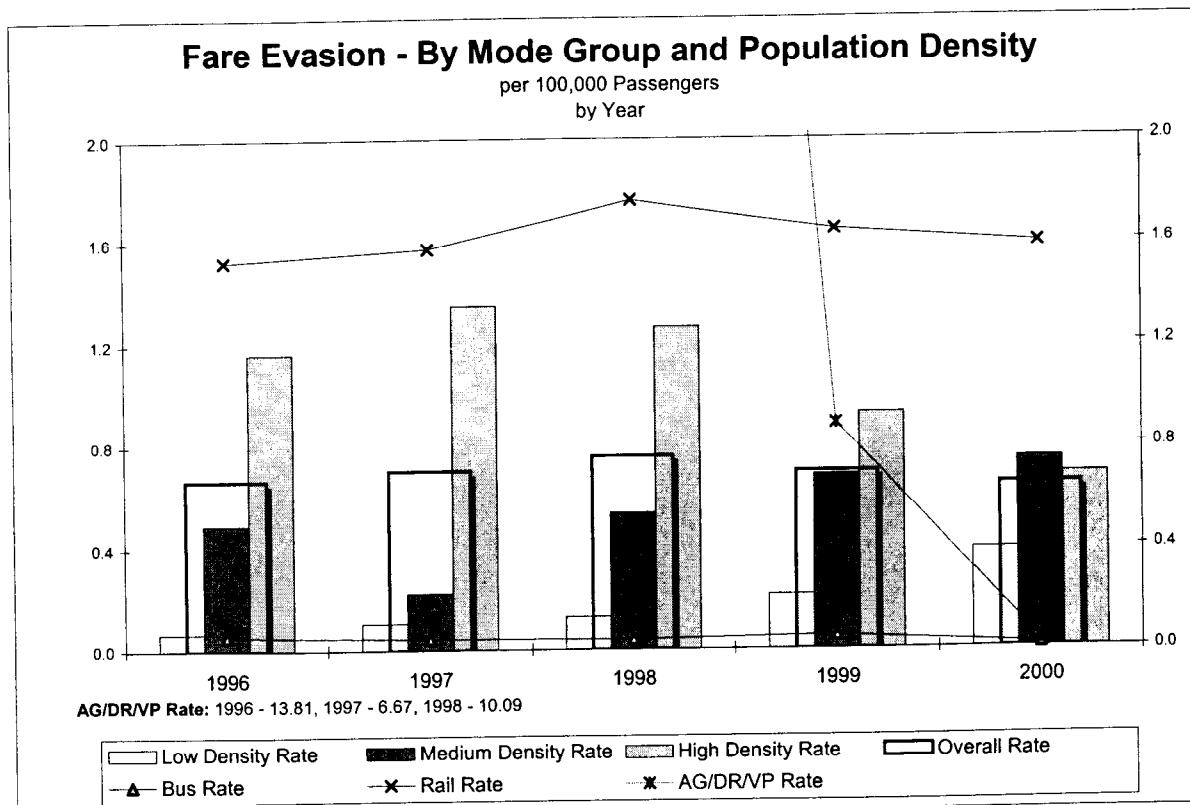

At times the AG/DR/VP rate was significantly higher than any other factor and obscured the other trends. Thus, it was omitted from those particular charts and noted in text at the bottom of each.
